

Ck040h Quick Connect Couplings

CUPLA enable flexible and fast connections in various fluid lines.

Nitto Kohki's unique technologies and dedicated research have been proven by numerous patents, which led to the development of 25,000 different CUPLA variations.

Nitto Kohki's quick connect couplings, "CUPLA" enable speedy connections/disconnections of various pipings, such as air, water, oil and gas.

They are active in various industrial fields, thanks to the experience in development of 25,000 different variations. Wide varieties of body materials such as steel, brass, aluminum, stainless steel and plastic are available to match every customer's needs.

Applications diversify from general household to high-tech industries such as in oceanic and space development. Numerous sizes are available for various needs.

Wide varieties of body materials such as steel, brass, plastic, aluminum or stainless steel are available.

A profusion of patented technology crystallized in global users recognition of high quality and high performance. ISO 9001 and 14001 Certification Award

"CUPLA" quick connect couplings are produced as the crystallization of high-grade know-how nurtured in the fields of fluid engineering and materials engineering, and top level precision machining technology. Having assessed Nitto Kohki consistent quality assurance and control system ranging from design and development through procurement of material, manufacture, assembly, and shipping, the Japan Quality Assurance Foundation, authority for inspection and registration, awarded us "ISO 9001", international standard for quality management systems, and "ISO 14001", international standard for environment management systems intended to perform global environment preservation and pollution control. High reliability built on unparalleled "high quality" and accumulated history of "productivity" for stable supply. CUPLA is receiving overwhelming support from many users spread all over the world as the top brand for fluid energy transmission and control.

CUPLA Quick Connect Couplings

For easy replacements	Replacements of pneumatic / hydraulic tools, pneumatic / hydraulic cylinders, mold attachments, etc.
For temporary installation in test line	Vacuum tests, pressure durability tests, leakage tests, running tests, etc.
For filling	For filling up various industrial gases, including inert gases, nitrogen, LPG, carbon dioxide, oxygen, fuel gas, etc.
For maintenance services	For computer cooling system, hydraulic cylinders in die-casting machines.
For transfer	For transfer of solid items through pipes such as screws and nuts as well as for electric power cable lines.
As joints	Applications other than fluid transfer covering connections for holding works while anchored or carried around.

Nitto Kohki's Official YouTube channel

Watch our products in action. We have various products from Quick Connect Couplings "CUPLA" to Power and Machine Tools, "delvo" Electric Screwdrivers, Linear-motor-driven Free Piston Pumps and also Door Closers.

www.youtube.com/c/NittoKohkiGLOBAL

Beware of imitations

Recently on the market, there have appeared similar products that invite misidentification or confusion with Nitto Kohki couplings, or such products that claim to have compatible maling parts. Nitto Kohki cannot accept responsibility for any accident that may result by mixed use with a coupling of another brand that seems connectable to a Nitto Kohki coupling. Nitto Kohki CUPLA are produced with their own unique tolerances and precision under strict quality control, and are not interchangeable with other couplings that are not under such tolerances. Therefore, connection to other brand of coupling may end up with abrupt breakdown or personal injury. Please be sure to check for our marks below, which are always inscribed on Nitto Kohki CUPLA products, when you order and purchase.

Quick connect couplings for air / water piping

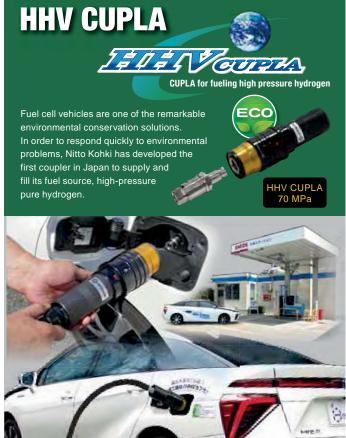

Nitto Kohki's environmentally-friendly Manufacturing

The coexistence of mankind and nature. Each company is now asked for a global level environmental conservation and improvement as important themes. As a part of the environmental improvement activities, we are offering various products such as "couplings", "machines and tools", "screwdrivers", "air compressors and vacuum pumps", and "door closers" as green procurement products.

"CUPLA" active in the widespread field of the manufacturing industry.

Coupling for fuel cell vehicles.

Nitto Kohki's environmentally-friendly Manufacturing

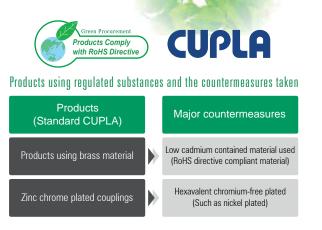

Nitto Kohki has made every effort in developing "Environmental Improvement Plans" through the implementation of ISO14001, to execute environmentally conscious business activities on a company-wide basis. As a part of our ongoing commitment to the environment, we are also commited to reduce and/or exclude restricted chemical substances from our products as designated by RoHS directives, laws and regulations of chemical substances.

All couplings except for the following products have been switched to green procurement compliant products.

- LEVER LOCK CUPLA
- All CUPLA products with Tube Fitter
- CUPLA CONNECTING JIG
- PRESSURE GAUGE

Please visit our website for applicable products. www.nitto-kohki.co.jp/e/

Non compliant

Note: Color of plating

The color of the zinc chrome plating is yellow, while nickel plating is silver. Some products may look different in appearance when changed.

Select an Appropriate CUPLA for the Job

Nitto Kohki has the wide range of CUPLA products covering almost every application and feature you need. In order to select an appropriate CUPLA for your job, you need to realize the following specifications.

Specifications to Be Checked When Selecting CUPLA

Fluid and the Temperature	Select a CUPLA with body and seal materials that suit the fluid and its temperature.	There are different body and seal materials to suit different fluids. For example, we recommend steel HI CUPLA for air, and brass or stainless steel for water. Please refer to Body Material Selection Table and Seal Material Selection Table at the end of this catalog for details about the correspondence between fluids and materials.
Fluid Pressure	Select a CUPLA suitable for the actual Maximum. fluid pressure.	Fluid pressure is also a key to CUPLA selection. Each series of hydraulic CUPLA have different structures to cope with each pressure resistance ranges up to 68.6 MPa (700 kgf/cm ²).
Automatic Shut-off Valve	Select a CUPLA with a valve structure that suits the piping application.	Valve combinations are two-way shut-off, one-way shut-off, or straight through types. Choose carefully. Unless it is a two-way shut-off type, the internal fluid will flow out from the CUPLA without valve when it is disconnected.
Operating Environment	Select a CUPLA with design and materials that suit each operating environment.	In choosing the type of CUPLA, body material and seal material, consider the temperature range, and/or corrosive atmosphere in the operating environment.
Size and Type of End Configurations	Finally and critically specify the size and type of end configurations.	Having checked the type and materials for the CUPLA, now specify the size and type of end configurations to suit the type of piping. Choose carefully, as the size affects the fluid flow rate.
End Configurations	size and type of end	Having checked the type and materials for the CUPLA, now specify the size and type of end configurations to suit the type of piping. Choose carefully, as the size affects the fluid flow rate.

If you cannot find a suitable "CUPLA", please contact us via our web site or enter the above details in the "CUPLA Inquiry Form" at the end of this catalog and send it to us by fax or post.

Symbols

Quick reference symbols:

(1) Working pressure, (2) Type of valve structure, (3) Applicable fluids, are given on each product page to help you to quickly select a suitable CUPLA. Please use them as the guide to grasp each type selection.

Working pressure	Valve strue	cture Plug	Socket	Valve W>CW W=	
1.0 MPa {10 kgf/cm ² }	Two-way shut-off	Two-way shut-off (Non-Spill)	One-way shut-off	One-way shut-off	Straight through
Applicable fluids	Air Water	Hydraulic oil	Fue	ygen, el Gas Ivent Food,	Inert gas, Vacuum, Helium

Glossary

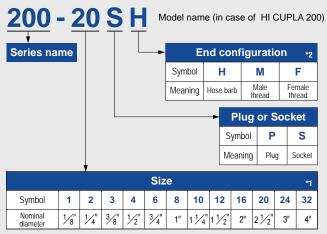

The following terms are used in detailed information pages of each CUPLA. Refer to these terms when checking CUPLA specifications.

International System of Units (SI Units) Units stated in this catalog are based on SI Units. The old units, which are non-SI Units, are also written within parentheses side by side with SI Units for reference only.

Glossary

The Meaning of Each Letter in the Model Name

The model name of a CUPLA indicates its size, whether plug or socket, and the end configuration. Rated pressure is also shown for some hydraulic couplings. Check the following tables to understand the model name implication before making your selection.

*1: The digit numbers of models for some products differs from those of symbols. For example, in case of HI CUPLA 20SH, not "20" but only "2" of the "20" corresponds to "2" of the symbol and indicates the nominal diameter of 1/4".

*2: For a product with only one type of end configuration, this symbol is omitted. For example, 210 CUPLA have only female threaded end so the model indicates only the size and plug or socket identification.

Body Material

This indicates the material that is used for the plug body or socket body that forms the flow path of fluid through the CUPLA. Some products have internal components of a different material. Please check with us for details.

Body N	laterial	Major applicable fluid
Common name	Mark	
Brass BRASS		Air, Water, Oil
Iron, Steel STEEL		Air, Oil
Stainless steel SUS		Air, Water, Oil

Please refer to Page 158 for body material selection table.

Size

This indicates the nominal size of the pipe thread connection or of the hose to be used.

Working Pressure

The normal allowable fluid pressure under continuous use.

Exceeding the working pressure may cause damage and leakage.

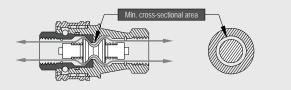

Pressure Loss

This shows the loss of pressure when fluid runs through the CUPLA set. They are measured values at our testing facilities. May differ according to the installation/piping method and operating conditions.

Minimum Cross-Sectional Area

This shows the minimum cross-sectional area of the fluid path when the CUPLA is connected. The position is different in some products.

Seal Material

This shows the material used to seal the CUPLA, usually an O-ring. The standard material is nitrile butadiene rubber. For materials other than those shown below, please specify such as silicone (SI), butyl (IIR), Kalrez (KL) or rubber for food, depending on your application.

Seal materia	l	Working	
Common name	Nitto Kohki symbol	Temperature Range	Features
Nitrile rubber	NBR (SG)	-20°C to +80°C	Standard seal with excellent oil resistance.
Hydrogenated nitrile rubber	HNBR	-20°C to +120°C	Compared with the standard nitrile rubber, the seal materia more heat and weather resistant.
	HNBR (H708)	-20°C to +120°C	In addition to the above features, the seal material can also be use refrigeration oil and refrigerant applications such as HFC-134a. (Th material is employed only in SP-V CUPLA and PCV PIPE CUPLA.)
Fluoro rubber	FKM (X-100)	-20°C to +180°C	Excellent for heat, weather, and oil resistance. Applicable to range of applications.
Chloroprene	CR (X-306)	-20°C to +80°C	Excellent weather resistance.
rubber	CR (C308)	-20°C to +80°C	In addition to the above features, the seal material can also be for refrigeration oil and refrigerant applications such as HFC-1.
Ethylene-propylene rubber	EPDM (EPT)	-40°C to +150°C	Excellent resistance to steam and hot water, also excellent resistance to weather and ozone.
Perfluoroelastomer	Р	0°C to +50°C	Excellent resistance to chemical and solvents.

Note: Even among rubber materials of the same category, the working temperature range differs depending upon the design of the CUPLA. For details, see the specifications of each CUPLA series. As for the Nitto Kohki symbol for rubber material, fluoro rubber is designated as "FKM" or "X-100" for example. The above are general features, but the seal resistance depends on fluid temperature, fluid concentration, and additives contained in the fluid.

Working Temperature Range

This shows the minimum and maximum working temperature range of the seal material used in the product.

Continuous use at the minimum or maximum temperature is not recommended. Please contact us for consultation.

Valve Structure

Two-way shut-off	Automatic shut-off valves are mounted in both plug and socket. The valves prevent spill out of fluid from the lines on disconnection.	
Two-way shut-off (Spill Reduction)	"Two-way shut-off" with spill reduction design allows extremely little admixture of air on connection and minimizes fluid spill out on disconnection.	
One-way shut-off	This design prevents fluid outflow only from the socket side on disconnection. Also available are plugs with an automatic shut-off valve.	
Straight through	Shut-off valve is equipped neither in plug nor in socket. Fluid flows out from either side on disconnection.	

Suitability for Vacuum

Indicates if the CUPLA has necessary performance required for vacuum applications. (Note that the performance in connected state differs from that of disconnected state.)

Interchangeability

Indicates whether the plug or socket of different series, types or models can be connected with each other.

Maximum Tightening Torque, Tightening Torque Range

Considering the balance between possible leakage caused by loose fit and too much structural stress when a CUPLA is mounted on a workpiece, the appropriate screw-in torque value or range is suggested by the maker.

Flow Direction

The design of some couplings may restrict the fluid flow direction to one way only. Check the suggested direction before installing.

Semi-standard CUPLA Series

"Semi-standard CUPLA Series" are products with an already established record but are not standard stock items.

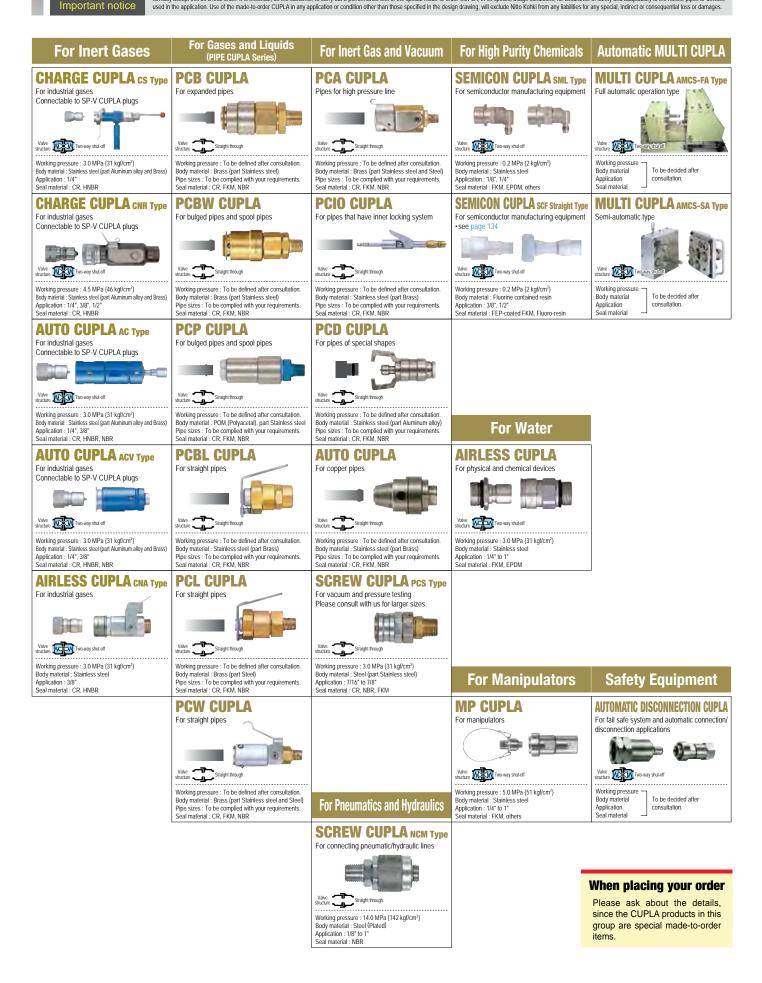

CUPLA Safety Mechanism	For Water
CUPLA with Single Lock ¹⁴³ Page Accidental disconnection prevention mechanism	TSP-HP CUPLA (for High Pressure) 144 High pressure and general purpose type Page
	Vote: Straight through
	Working pressure : 9.0 MPa {92 kgf/cm ² } Body material : Stainless steel Application : 1/4" to 1/2" Seal material : NBR, etc.
CUPLA with Safety Lock 143 Page	
	For Medium Pressure
	SP CUPLA Type A PV Type Connectable with residual pressure With Purge Valve
	Vale Vale Toro vey shu of
For Temperature Controllers	Working pressure : 2.0 to 4.5 MPa {20 to 46 kgf/cm ² } Body material : brass, Stainless steel Application : Rc 3/4 to Rc 1 1/2 Seal material : NBR
NYU CUPLA 144 Page or small bore piping (10 mm OD) for temperature control upplicable fluid : Water, gas, air	
Alter Carlos Sud-off	
Vorking pressure : 1.0 MPa (10 kgf/cm²) tody material : Stainless steel, brass (Plated) picialion : Please It us know the required sizes and end configurations. eal material : NBR, EPDM, FKM	For Low Pressure (air)
LITTLE CUPLA 144 Page or small bore piping (14 mm OD) for temperature control pplicable fluid : Water, gas, air	PLASTIC CUPLA BC Type Valveless type for low pressure air piping
Alter Two-way shut-off	Vale Structure Straight through
Vorking pressure : 1.5 MPa {15 kgf/cm ² } ody material : Stainless steel pplication : Please let us know the required sizes and end configurations. eal material : NBR, EPDM, FKM	Working pressure : 0.07 MPa (0.7 kgf/cm ²) Body material : Plastic Application : 1/4", 3/8" Seal material : NBR
HIGH FLOW CUPLA 145 or piping to control temperatures Page pplicable fluid: Water, Heat transfer fluids Page	PLASTIC CUPLA BCC Type Equipped with flow controller for low pressure air piping
falle with Two-way stut. off	Vale structure One-way shut off
Vorking pressure : 1.0 MPa {10 kgf/cm ² } ody material : Stainless steel, brass opplication : 1/4' to 1/2' eal material : EPDM, FKM	Working pressure : 0.07 MPa {0.7 kgf/cm²} Body material : Plastic Application : 3/8" Seal material : NBR
HIGH FLOW CUPLA BI Type 146 Page IIGH FLOW CUPLA with ferrule flange mount	When placing your order
pplicable fluid: Water, Heat transfer fluids	Please select your appropriate combination from the column in each product page (on the right beside the product name) then
Vorking pressure : 1.0 MPa {10 kgf/cm²} Vorking pressure : 1.0 MPa {10 kgf/cm²} vody material : Stainless steel	decide the seal and body materials from the selection tables listed at

Accessories

Special Made-to-Order CUPLA

Nitto Kohki is developing couplings with various functions and specifications to suit respective user's applications. The CUPLA products on this page are examples of such.

Following plugs and sockets can be connected with each other

Standard CUPLA Series

Index

Examples of air line connections using HI CUPLA group models

Air distribution is one of the typical piping systems. Various HI CUPLA Series models meet all needs of air piping from main supply, relays in factories, pipe end connections to pneumatic tools, and those of air piping within equipment. The following sketch gives you some examples of air piping using HI CUPLA Series and may serve as a good reference in selecting appropriate CUPLA products.

For Low Pressure

MICRO CUPLA

For piping in pneumatic control devices

Compact, lightweight CUPLA with only 9.5 mm outer diameter. Push-to-connect operation. Tube Fitter type for even easier tube insertion.

- Even though the valve is built in the socket, the sleeve outer diameter is confined to 9.5 mm.
- Push-to-connect design.
- Compact design for piping in narrow spaces.
- Plated brass and stainless steel bodies are available for excellent corrosion resistance.
- Available in various end configurations to satisfy a wide range of pneumatic applications.

Note: Fluid will flow out from the plug side when disconnected. Take necessary precaution if the fluid is water.

Specifications						
Body ma	terial	CUPLA : Brass (Plated), Stainless steel (SUS 304) Tube Fitter Part : Brass (Plated) , Plastic				
	Thread	1/8" , M5 x 0.8

For Low Pressure

SMALL CUPLA

Lightweight and compact for use on air lines and scientific equipment

Lightweight and compact push-toconnect operation. Responding to requirements of modular combinations.

- Compact socket with built-in valve and 14 mm OD sleeve. Suits applications calling for compact and modular components.
- Just push in the plug to the socket for connection by easy one hand operation.
- Plated brass for corrosion resistance adopted for the body. Stable performance for long life.
- A wide line-up of end configurations (female and male threads, hose barbs, manifolds) enables suitability with a wide range of piping applications such as pneumatic, scientific and medical equipment.

• Also available with quick connect/disconnect Tube Fitter type.

Note: Fluid will flow out from the plug side when disconnected. Take necessary precaution if the fluid is water.

COMPACT CUPLA

Small multipurpose type for low pressure lines

Compact 17.5 mm outer diameter, yet socket and plug have built-in automatic shut-off valves.

- Both socket and plug have built-in automatic shut-off valves.
- Compact size with maximum outer diameter 17.5 mm.
- For small bore piping from temperature control piping to scientific equipment.
- Body materials in stainless steel (SUS304) or brass, excellent in corrosion resistance.
- Four types of end configuration enable suitability with a wide range of piping applications.

For Low Pressure

CUBE CUPLA

Both socket and plug have built-in valve types and valveless types. Simple one action for connection or disconnection. Lightweight plastic coupling.

- In all five color variations to prevent piping mistakes.
- Ultra-lightweight, made of polyacetal resin. Compact design for space saving.
- Just push plug into socket for connection.
- Simply press the button on the socket for disconnection. • Two-way shut-off type with valve on both sides and straight through type with
- Iwo-way shut-off type with valve on both sides and straight through type with low pressure loss are available.
- L type plug ideal for piping in narrow spaces are available.
- Socket and plug cannot be disconnected unless two buttons on the socket are pressed simultaneously.

Specifications								
Body material		Polyacetal resin (POM)						
Size		4 mm and 6 mm ID tube, 1/8"						
Pressure unit	MPa	MPa kgf/cm ² bar PSI						
Working pressure	1.0	10	10	145				
Seal material	Seal material	Mark	Working temperature range	Remarks

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products.

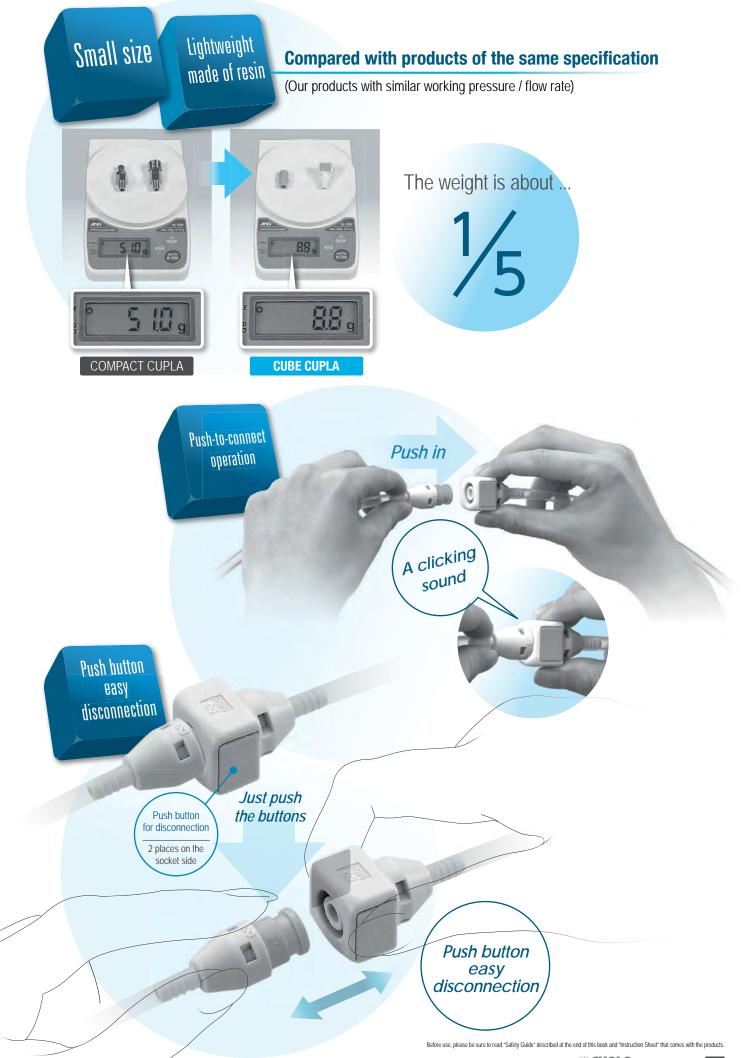

- Resin (POM) such as the main body ... Conforms to article No.3-D-2-(2)-2 and has passed both material and elution tests specified in the Food sanitation Act and the standards For Food and Food additives (Notice No. 370 of 1959 issued by the Ministry of Health and Welfare of Japan).

- O-ring (NBR) ... Conforms to article No.3-D-3-(1) and has passed both material and elution tests specified in the Food sanitation Act and the standards For Food and Food additives (Notice No. 370 of 1959 issued by the Ministry of Health and Welfare of Japan).

- Silicone type grease (NSF H1, NSF 61 registered product) is applied to the sealing material.

- The CUPLA should be evaluated before use to determine the suitability with applications that require sanitation control.

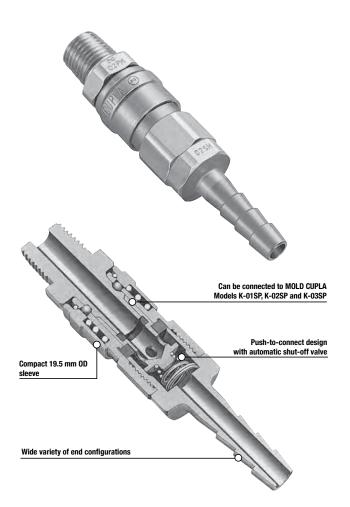

SUPER CUPLA

Light, compact for air piping connections

The lightweight design makes the CUPLA best suited to power tools! Push-to-connect for easy operation.

- Lightweight design suits direct connection to power tools. Aluminum body is adopted for some models to reduce the weight.
- Just push the plug into socket for easy one hand connection.
- Available in various end configurations for a wide range of pneumatic applications.
- Model 02S20P can be connected with sockets of HI CUPLA Models 10, 17, 20, 30 and 40.
- Also available with quick connect / disconnect Tube Fitter type.

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products

For Low Pressure

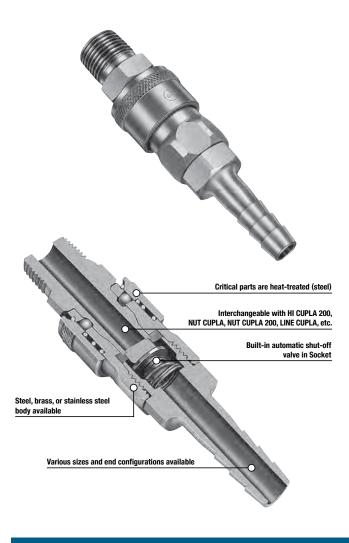

HI CUPLA

Universal purpose couplings for air lines

From factory air line to pneumatic tool connection, available in various body materials, sizes and end configurations. Excellent durability.

- An excellent general purpose coupling for connecting factory air supply to pneumatic tools.
- Steel coupling is suitable for air. Brass or stainless steel is suitable for water. Note that fluid will come out from the plug when disconnected.
- Critical structural parts of steel models are heat-treated for increased strength giving greater durability and resistance to wear.
- Available in various body materials, sizes and end configurations applicable to a wide range of applications.

Application Example

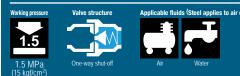

For Low Pressure

HI CUPLA BL

Universal purpose couplings with sleeve lock mechanism for air lines

Sleeve-lock mechanism is engaged by rotating the sleeve after connection.

- Sleeve-lock mechanism prevents accidental disconnection.
- An excellent general purpose coupling for connecting factory air supply to pneumatic tools.
- Steel coupling is suitable for air. Stainless steel is suitable for water. Note that fluid will come out from the plug when disconnected.
- Critical structural parts made of steel are heat-treated for increased strength giving greater durability and resistance to wear.
- Various body materials, sizes, and end configurations are available.
- SN-BL type for connection to urethane hose requires no hose clamp.

Specifications

HI CUPLA 200

Push-to-connect type for air lines

Simple and secure push-to-connect type! Big flow rate! End-face seal design. Gives excellent handling touch.

- Just push the plug into the socket for simple and secure connection. This reduces connection time and improves efficiency.
- New valve design for low pressure loss to achieve flow rate increase (15% up over the conventional model).
- End-face seal is achieved when connected.
- Enhanced operability with low connection resistance.
- End-face seal design is superior to external seal with an O-ring due to no seal damage caused by exhausted lubrication.
- Available only with steel body. Not suitable for water or oil.
- Also available with quick connect/disconnect Tube Fitter type.

Application example

WAF : WAF stands for width across flats.

For Low Pressure (Air) HI CUPLA for Connection to Braided Hoses NUT CUPLA NUT CUPLA 200 ROTARY NUT CUPLA

For connection to urethane hose, braided hose

No hose clamp required! Fitted with hose guard nut to prevent possible kinking. HI CUPLA for connection to braided hoses is now available.

- Nut types are available in HI CUPLA Series and HI CUPLA 200 Series. Hose guard nut type available to prevent hose kinking.
- To mount on hose, simply slide it over the nipple and tighten the nut.
- The design to tighten outside of hose reduces hose slip away or fluid leaks.
- Also available are ROTARY NUT CUPLA equipped with ball bearing swivel
 mechanism to prevent and relieve tension on operator's hands.

Urethane hose size		For ø5 mm x ø8 mm, ø6 mm x ø9 mm hose For ø6.5 mm x ø10 mm, ø8 mm x ø12 mm hose For ø8.5 mm x ø12.5 mm, ø11 mm x ø16 mm hose

LOCK CUPLA 200

Air line coupling with sleeve safety lock feature

Push-to-connect operation. Added easy lock design for safety!

- Locking mechanism prevents accidental disconnection after connection. Good for connections between hoses.
- Simple one push of plug and socket to each other for connection. Easy handling improves job efficiency.
- Ball bearing swivel mechanism prevents hose twists and relieves load on holding hands (SNRG type).
- To mount on hose, simply slide it over the nipple and tighten the nut (SNRG type).
- Hose guard nut to prevent hose from kinking as a standard feature (SNRG type).
- Low pressure loss valve design gives improved flow rate.

Air flows in either direction from plug or from socket side when coupled. Ideal for connection of factory air supply lines to pneumatic devices.

- Can be connected with plugs for HI CUPLA Models 10, 17, 20, 30 and 40 and allows fluid to flow from either plug or socket side when coupled.
- Wide range of connections such as from ports on air pipes in factory to individual pneumatic devices.
- Critical structural parts are heat-treated for increased strength giving greater durability and resistance to wear.
- Available in various sizes and end configurations to suit a wide range of applications.

FULL-BLOW CUPLA

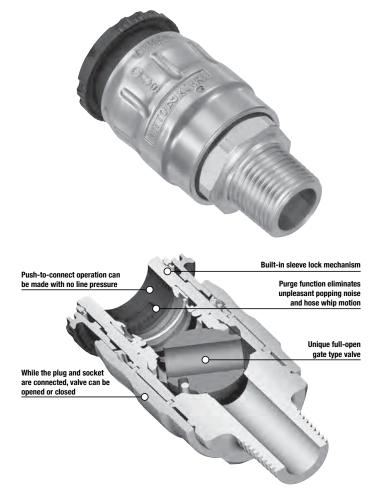

Air line coupling with low pressure loss and high flow rate

Unique full-open gate type valve mechanism realizes low pressure loss and high flow rate, which reduces required source air volume.

- The flow rate is increased by up to 40% more than that of conventional CUPLA.
- During connection and disconnection, the valve is closed, enabling connection/disconnection under zero line pressure.
- When the sleeve of socket is returned to its original position, the purge mechanism releases the residual air pressure in the plug, eliminating unpleasant popping noise and hose whip motion on disconnection.
- Built-in sleeve lock mechanism prevents accidental disconnection of CUPLA, ensuring safe operation.
- The valve can be opened and closed while the socket and plug are connected.

• The weight is reduced by 30 to 45% compared with that of conventional CUPLA. Note: Direct mounting of FULL-BLOW CUPLA to percussive and vibrating tools should be avoided.

Socket SN type (For urethane hose connection)

How It Works

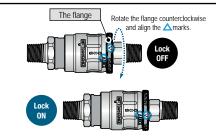

1. Open the valve

Only after connection with the plug, you can slide the socket sleeve B toward the plug in order to open the built-in valve. Full flow path is then obtained.

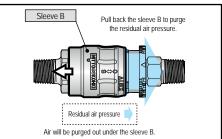

2. Lock the sleeve

Rotate the flange counterclockwise to lock the sleeve B. Without unlocking the plug you cannot disconnect.

3. Purge the residual air

To disconnect the plug, first turn the flange back to its original position for unlocking and then pull the sleeve B back to the original position. The built-in valve will be closed to purge the residual air pressure

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products.

FULL-BLOW CUPLA

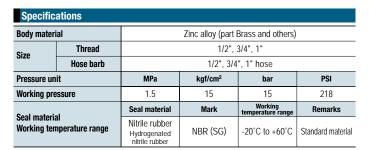

PURGE HI CUPLA PVR Type

Air line coupling with built-in residual air pressure release function

Connection can be made smoothly regardless of the existing pressure inside the socket.

- Push-to-connect operation. Easy one-hand operation.
- Built-in sleeve lock mechanism prevents accidental disconnection of CUPLA, ensuring safe operation.
- Upon completion of sleeve locking the valve will open to supply air.
- When the sleeve is turned back to its original position, the valve is closed and purges residual air pressure in the plug without unpleasant popping noise and hose whip motion on disconnection.
- Even after connection, valve opening/closing control is possible.
- Flow rate increases by approximately 20% over that of HI CUPLA Model 400SM.
- Can be connected with plugs for HI CUPLA Models 400, 600 and 800.

Function of PURGE HI CUPLA PVR Type

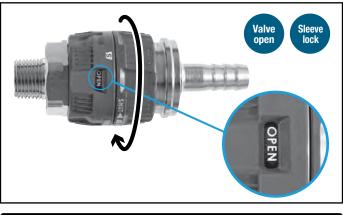

1. Connection

Valve opening/closing operation and plug connection to socket can be made independently. Push-to- connect operation is achieved regardless of existing pressure inside the pipe.

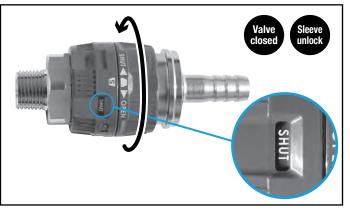

2. Open the valve and lock the sleeve.

Turning the operation ring will open the valve in the socket to supply air and lock the sleeve to prevent accidental disconnection.

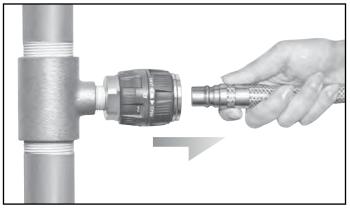

3. Close the valve and unlock the sleeve

Turning the operation ring back to its original position will close the valve and stop air flow, release the residual air pressure in the plug, and unlock the sleeve.

4. Disconnection

Disconnection can be made without unpleasant popping noise and hose whip motion due to no residual air pressure inside the plug.

PURGE HI CUPLA

Air line coupling with residual pressure release function

Push-to-connect operation even with existing internal pressure! Eliminates unpleasant popping noise and hose whip motion on disconnection.

- Just push in the plug for connection regardless of internal pressure in socket.
- Even after connection, lever operation gives perfect control over valve opening/closing.
 In disconnection, lever action releases residual air pressure in the plug
- without unpleasant popping noise and hose whip motion. • Safe design prevents lever-
- operated valve from opening when plug is not connected.

Can be connected to correspondin HI CUPLA plugs

Push-to-connect design

Lever action opens / closes the valve in the CUPLA

How to Operate	
	Just push the plug into socket. (In this stage the valve of the socket is not open.)
2	Turning down the lever opens the valve and allows the fluid flow. (The turned-down lever works as a sleeve stopper and prevents disconnection.)
3	When the lever is pulled up, residual air pressure in the plug is purged without unpleasant popping noise and hose whip motion on disconnection. In this stage, the socket valve is still closed.

Suitability for Vacuum

Not suitable for vacuum application in either connected or disconnected condition.

PURGE LINE CUPLA

Simple air line coupling manifold with residual pressure release function

Residual pressure can be released by a mere lever turn. Very smooth connection/disconnection!

- Single action, just push in the plug to connect regardless of internal pressure in socket.
- No unpleasant noise of air pressure discharge and no hose whip motion on disconnection for safety operation.
- Safe design socket valve will not open or close unless plug is connected.
- Even after connection, a lever turn will open/close valve with perfect control of air flow or line shut-off.
- Enables simultaneous air supply to three outlets from a single air line. (A single outlet PURGE HI CUPLA is also available – see the pages of PURGE HI CUPLA for details.)

ROTARY LINE CUPLA

Simple design air line couplings on free turn manifold

Each air outlet can be turned freely to any angle independently.

- Multiple outlets are available from single air supply source.
- Sideway air outlets are rotatable to any angle. Possible hose twists can be eliminated by the component couplings' swivel mechanism.
- Choose either RT type (2 outlets) or RE type (3 outlets) to suit your application.

Optional Items : PRESSURE GAUGE and DRAIN COCK

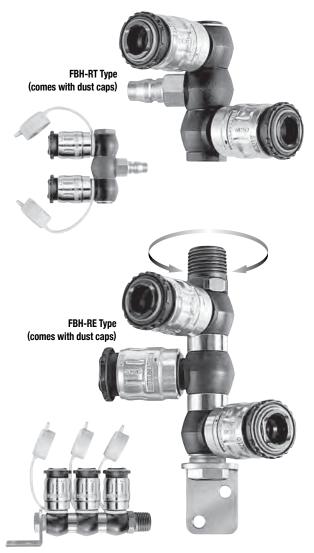

For Low Pressure (Air) ROTARY FULL-BLOW LINE CUPLA

Free rotating branch air line coupling with low pressure loss & high flow rate

Each air outlet can be turned freely to any angle independently.

- Multiple outlets are available from single air supply source.
- Sideway air outlets are rotatable to any angle.
- Choose either RT type (2 outlets) or RE type (3 outlets) to suit your application.
- The flow rate increases by 40% to 50% over that of conventional CUPLA.
- During connection and disconnection, the valve is closed, enabling connection/disconnection under zero line pressure.
- When the sleeve of socket is returned to its original position, the purge mechanism releases the residual air pressure in the plug, eliminating unpleasant popping noise and hose whip motion on disconnection.
- Built-in sleeve lock mechanism prevents accidental disconnection of CUPLA, ensuring safe operation.
- The valve can be opened and closed while the socket and plug is connected.

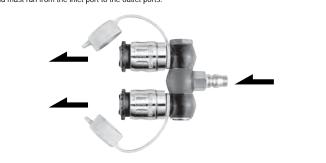

Specifications

Interchangeability

Interchangeable with plugs of HI CUPLA models 10, 17, 20, 30 and 40. Interchangeable with each models of NUT CUPLA series and HI CUPLA series. Not interchangeable with some plugs of plastic HI CUPLA 250 (discontinued product). Please see page 19 for "HI CUPLA Series Interchangeability".

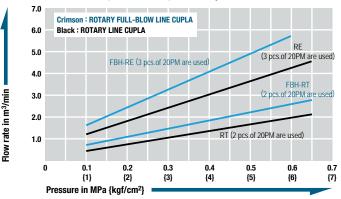

Minimum Cross-Sectional Area (mm ²)				
Model	FBH-RT	FBH-RE		
Minimum cross-sectional area	44	44		

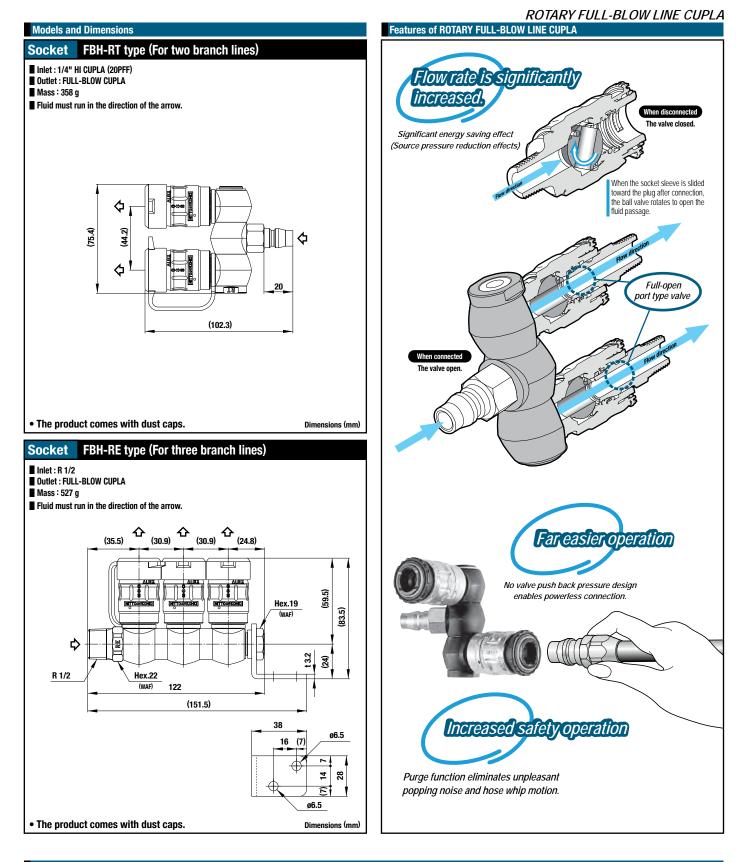

Suitability for Vacuum

Not suitable for vacuum application in either connected or disconnected condition.

[Test conditions] •Fluid : Air •Temperature : Room temperature •Plug : 20PM

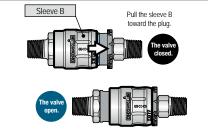

How It Works

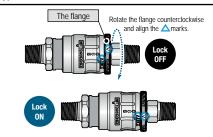

1. Open the valve

Only after connection with the plug, you can slide the socket sleeve B toward the plug in order to open the built-in valve. Full flow path is then obtained.

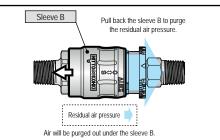

2. Lock the sleeve

Rotate the flange counterclockwise to lock the sleeve B. Without unlocking the plug you cannot disconnect.

3. Purge the residual air

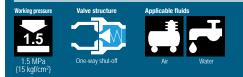

To disconnect the plug, first turn the flange back to its original position for unlocking and then pull the sleeve B back to the original position. The built-in valve will be closed to purge the residual air pressure

For Low Pressure

HI CUPLA ACE

Lightweight plastic coupling with automatic safety lock for air line applications

The weight is merely a quarter of steel HI CUPLA's and smooth push-in connection is achieved. Sleeve lock mechanism for safety operation.

- Pressure ratings comparable to steel CUPLA.
- A built-in "lock mechanism" locks the sleeve upon connection, thus prevents accidental disconnection.
- Just push plug into socket for simple connection.
- The weight is a quarter of steel HI CUPLA for easy handling.
- Can be used for air and water.
- Air flows in either direction from plug or from socket side when coupled.
- Plug and socket with hose guard nut are also available (see page 64 of NK CUPLA HOSE / NK CUPLA COIL HOSE for details).

ROTARY PLUG

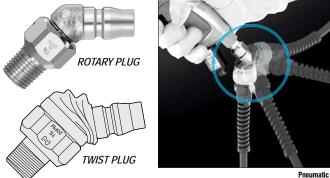

For pneumatic tools and devices

Newly developed rotary function allows 360° swivelling! Big improvement for handling of pneumatic tools!

- · Rotary neck plug for hose connection to pneumatic tools and pneumatic devices.
- Fits at 45° angle to the tool eliminating annoying offset load caused by connected hose.
- Ideal compact design enables optimum workability by simple body structure. Now far lighter and smaller than conventional models.
- New dust-proof design for increased durability.
- · For air tackers, nailers, impact wrenches and other pneumatic tools.

Comparison by appearance

TWIST PLUG

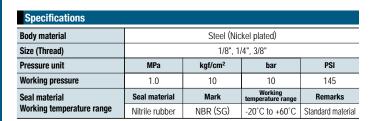

For pneumatic tools and devices

Eliminates hose twisting, kinking, or bending! Greatly improves working efficiency!

- A plug with a free twisting neck for hose connections to pneumatic tools and devices.
- Free angle control (max.70° flexible) provides comfortable job positions, even in narrow spaces or with overhead works.
- The flexible part is reinforced with self-lubricating plastics to give smooth bending action and excellent durability.
- Dust protector over the flexible part prevents dirt and swarf from entering.

Pressure - Flow Characteristics

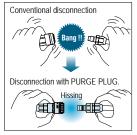

WAF : WAF stands for width across flats.

PURGE PLUG

For air lines with purge mechanism

Eliminates unpleasant popping noise and hose whip motion when CUPLA is disconnected.

- When the CUPLA is disconnected, the pressure left in the plug side hose is released gradually without unpleasant popping noise and hose whip motion.
- Unique design of air purge system enables the residual pressure release quickly and quietly.
- A unique but simple purge valve design is good for long and repeated use.
- The function is assured even under a high supply pressure or with a long hose. Note: This product is not a check valve to totally stop the air flow.

ANTI-VIBRATION PLUG HOSE

Plug hose for vibrating and percussive air tools

Protects the CUPLA from shock generated by vibrating tools and impact tools.

- Optimizes life and prevents wear of "CUPLA" by absorbing strong shocks generated by connected vibrating tools.
- Prevents hard-to-notice flow reduction caused by "CUPLA" wear under continuous vibration.
- Flexible rubber hose allows free and wide range of tool motion.

Application

DUSTER CUPLA

Air line coupling with air blower function

Three functions in one: connection, air blow, hose twist release ! Dust blow without detaching the tool !

- HI CUPLA comes with compact air blow function.
- Improves job efficiency by air blow with tool still connected to hose.
- Ball bearing swivel mechanism prevents hose twist and relieves tension on operator's hand.
- Special design of air blow button switch is free from in line air pressure no hard press down required.
- Also simple is routine water drain from air line before starting daily work.

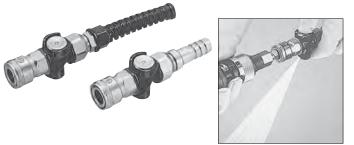

Photo shows simulated air flow.

For Low Pressure

MINI CUPLA

Standard type for use on equipment for welding and gas cutting, etc.

Exclusively for oxyacetylene equipment. Many variations with higher flow rates!

- From cylinders to torches, all piping connections associated with welding and cutting equipment are push-to-connect operations.
- Double-lip seal prevents minor leak during connection. Oxygen and fuel gas CUPLA have different sizes to prevent accidental interconnection.
- Pressure loss is minimized to achieve higher flow rate.
- Various types of end configurations have been standardized to comply with a wide range of welding and cutting equipment

applications. Sockets themselves or plugs themselves are interchangeable with MINI CUPLA SUPER's counterparts.

• LINE CUPLA MINI is also available for multiple piping.

Push-to-connect operation (Built-in automatic shut-off valve in socket)

Wide variety of end configurations

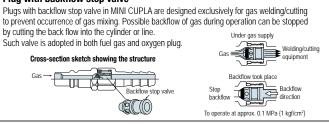

Different CUPLA sizes prevent

accidental interconnection of

oxygen and fuel gas

Each 1 pc.

MINI CUPLA SUPER

Heavy-duty push-to-connect type for oxyacetylene piping

Exclusively for welding and cutting equipment.

- · From cylinders to torches, all piping connections associated with welding and cutting equipment are push-to-connect operations.
- Plated body for better corrosion resistance.
- Heat-treated plugs for better durability.
- Oxygen and fuel gas CUPLA have different configuration sizes with sleeves in different appearances, silver colored plating for oxygen and copper colored plating for fuel gas, to prevent accidental interconnection.
- Smaller diameter design enables wider range of applications.
- · Various types of end configurations have been standardized to comply with a wide range of welding and cutting equipment applications. Sockets themselves or pluas

themselves are interchangeable with MINI CUPLA's counterparts.

> Different CUPLA sizes and sleeve colors prevent accidental interconnection of oxygen and fuel gas

> > Can be connected with MINI CUPLA

MOLD CUPLA

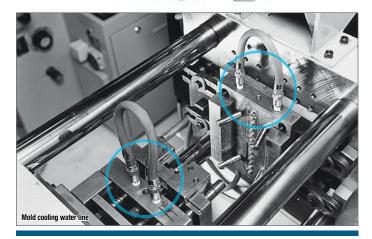

General purpose and mold coolant port coupling

Designed for quick replacement for die and mold ! Rust resistant models having many variations.

- Space saving design for molds with closely spaced coolant ports.
- Long sleeve socket facilitates connection/disconnection with plug embedded in mold.
- Enables quick mold cooling water line connection/disconnection.
- Various sizes and end configurations to suit a wide variety of mold applications.
- Can be connected with SUPER CUPLA, excluding K3 and K4 types.
- Push-to-connect design. (Built-in automatic shut-off valve in the socket) Also available is CUPLA without valve (Please specify in ordering).
- CUPLA for braided hose connection requires no hose clamp. (Model K-90SN)

SN type (For braided hose connection) Socket

For Low Pressure

MOLD CUPI **High Flow Type** High flow type mold coolant port coupling

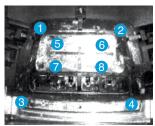

Flow rate has doubled to increase productivity.

- High flow type K3 and K4 series are added to MOLD CUPLA series for mold coolant and heated oil port coupling.
- Almost double flow rate compared with our standard K-01, K-02 and K-03 series, increasing productivity.
- Space saving design for molds with closely spaced coolant ports.
- · Long sleeve socket facilitates connection / disconnection with plug embedded in mold.
- Enables quick mold coolant hose connection / disconnection.

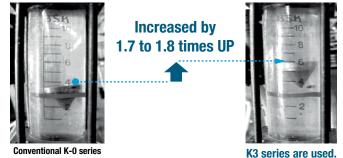

Results of reduced cooling time in the field

A customer replaced conventional K-0 series MOLD CUPLA with the K3 series and shortened the cooling time from 30 seconds to 21 seconds meaning an 18% reduction per shot and increased productivity by 20%. Temperature checks at 8 positions on the mold showed that surface temperatures on average had fallen by 3°C, providing evidence of the high cooling efficiency.

Flow comparison

Coolant water flow rate was checked with a flow meter, which confirmed increase by 1.7 to 1.8 times, when MOLD CUPLA K3 series are used.

Conve	entional	K-0 s	series
MOLD	CUPLA	were	used.

	μ	K4-04PM	32 or more	0 to 3	39	socket wrench to be used. (See JISB4636-1, JISB4636-2)		

Flow Rate - Pressure Loss Characteristics (Comparison with MOLD CUPLA)

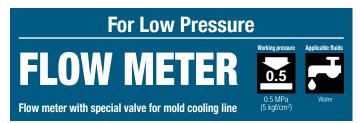

Notes: Also available without socket valve (Made-to-order item), identified by product code TS (e.g. K3-03SH without valve is K3-03TSH). Also available are CUPLA with sleeve stopper (Made-to-order item).

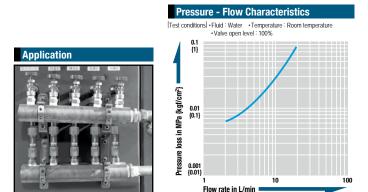

For stable and accurate coolant flow rate.

Graduated scale enables easy visual check of coolant flow rate regardless of operator.

- Built-in flow rate adjustment valve enables desired setting of mold conditions for each machine.
- Easy resumption of previously set molding conditions to cut lead times.

 T2 side is equipped with rotary function. Even after fixing the body on T1 side to the piping, additional screw tightening on T2 side is possible.

Models and Dimensions / Flow Direction

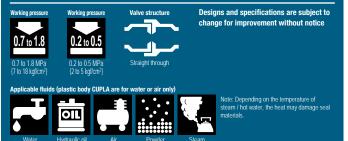

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products.

WAF : WAF stands for width across flats.

For Low Pressure

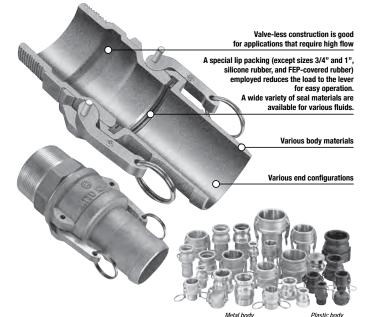

LEVER LOCK CUPLA Metal Body / Plastic Body

For bulk flow, low pressure applications

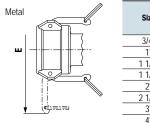

Light lever pull-down will connect the plug and socket without fail ready to flow liquid or gases.

- This CUPLA complies with diversified applications in liquid or gas transportation.
- End-face seal structure enables no bumps or hollows on the internal fluid passage, and ensures smooth fluid transportation.
- A special lip packing (except sizes 3/4" and 1", silicone rubber, and FEP-covered rubber) employed reduces the load to the lever for easy operation.
- Connection part dimensions comply with US military specifications MIL-A-A-59326.
- The variety of body materials, sizes and end configurations has been standardized to comply with wide range of applications.
- Additional stopper function design will enhance safety (only for made-to-order metal body product).

For Medium Pressure

TSP CUPLA

For medium pressure general applications

Valveless structure suits high viscosity fluids! Various body materials, sizes and end configurations. Braided hose connection types are newly added.

- · Valveless construction drastically saves pressure loss and achieves high flow rate.
- Suitable for high viscosity fluids (such as grease).
- Available in various standard body materials, sizes and end configurations to cope with diversified applications and operating situations.
- No hose clamp required! Simple and secure connection to braided hose.
 Note: See the pages of Seal Material Selection Table at the end of this catalog for the suitability of seal materials to fluids.

Body material		1/8". 1/4"	3/4"	ass 1 1/4"		Stainless s	3/4"	4), Steel (Nic 1 1/4"	1 7

	Ethylene-propylene rubber		EPDM (EPT)		-40°C to +150°C				

· SUS316 is available as option.

 Maximum working pressure and working temperature range of TSP CUPLA for braided hoses depend upon the specifications of braided hoses to be used.

· Seal material available for braided hoses is nitrile rubber only.

· Seal material available for steel body is nitrile rubber only.

Tighten the nut for braided hoses until it is flush against the hose barb base.

Flow Direction

Fluid flow can be bi-directional when socket and plug are connected.

Interchangeability

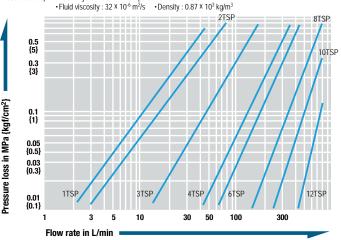

Sockets and plugs can be connected regardless of end configurations if the first number(s) of the model is the same.

Hydrocarbon type grease is applied to the threaded part of stainless steel nut for TPN type and TSN type to prevent galling. Before use, please be sure to read 'Safety Guide' described at the end of this book and 'Instruction Sheet' that comes with the products Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products.

For Low Pressure

One-piece design of TSP CUPLA socket and ball valve. Sleeve stopper mechanism prevent accidental disconnection during connection. (when the valve is open.)

• Socket valve can be opened and shut off while socket and plug are connected.

• Ball valve design provides for high flow rate.

• High viscosity fluids such as grease can be applied.

Value of BV type only. The minimum cross-sectional area may vary depending upon the end configuration of the plug.								

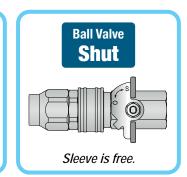

Suitability for Vacuum

Not suitable for vacuum application in either connected or disconnected condition.

Flow Rate – Pressure Loss Characteristics

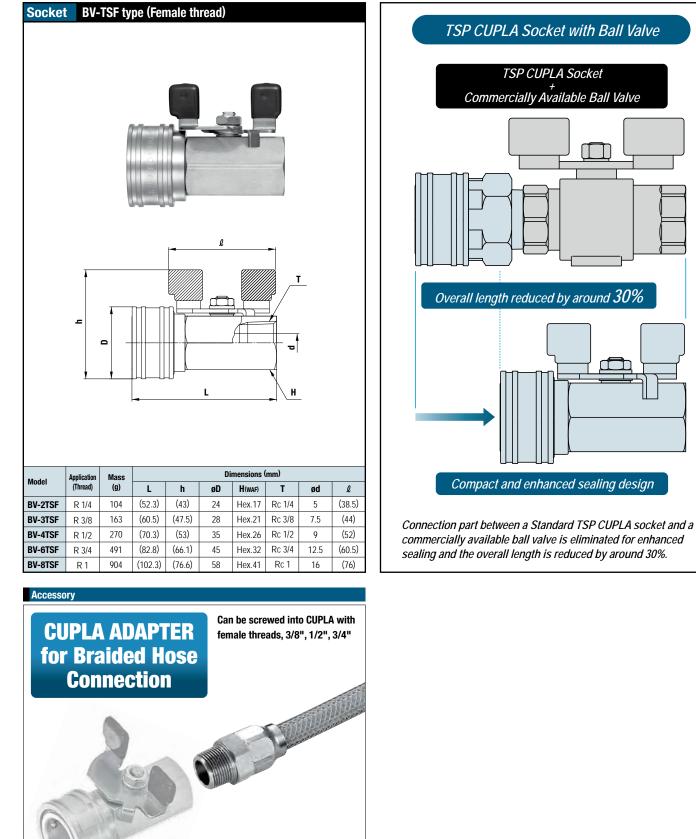

WAF : WAF stands for width across flats.

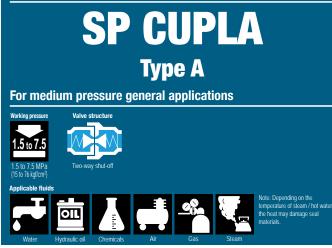

Application

See page 152 for the details.

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products.

For Medium Pressure

For medium pressure applications, with automatic shut-off valves in both socket and plug. Various body materials, sizes and end configurations. Plugs with male thread end are also available.

- Automatic shut-off valves in both socket and plug prevent fluid spill out on disconnection.
- Available in various standard body materials, sizes and end configurations to cope with diversified applications and operating situations.

New self-aligned valve design provides better seal

The new design of the valve head makes smooth self-aligned return to its original position when socket and plug are disconnected. This mechanism enhances safety sealing of individual socket or plug when disconnected (1 to 8SP-A Type).

• The photos above show steel coupling. • The appearance of stainless steel coupling (SUS304) differs slightly from that shown in the photos above. *1 1P-A (Steel) and 1S-A (Steel) are made-to-order items. *2 Stainless steel: 54 x ø59 *3 Stainless steel: 63 x ø67

*4 Model 8P-M-A indicates an approximate insertion length because there is no difference in level on the body.

For Medium Pressure

HOT WATER CUPLA HW Type

For temperature control piping

The most suitable rubber for hot water adopted. Best suited for hot water applications such as plastic moldings.

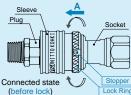

- The safety lock function prevents accidental disconnection caused by vibration or impact.
- Nickel plated on the liquid contact parts to improve corrosion resistance.
- The socket has double O-ring for improved seal.

Safety lock function (Sleeve lock)

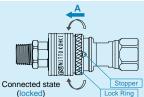

How to lock Slide the Lock Ring in the direction of the arrow A and rotate it simultaneously. When the Stopper is aligned with the shallower cutout on the Lock Ring, the CUPLA will be locked.

How to unlock

Slide the Lock Ring in the direction of the arrow A and rotate it simultaneously. When the Stopper is aligned with the deeper cutout on the Lock Ring, the CUPLA will be unlocked.

Specifications							
Body material		Brass (Nic	ckel plated)

Flow Rate Pressure Loss Characteristics

[Test conditions] Fluid : Water
 • Temperature: 25°C±5°C

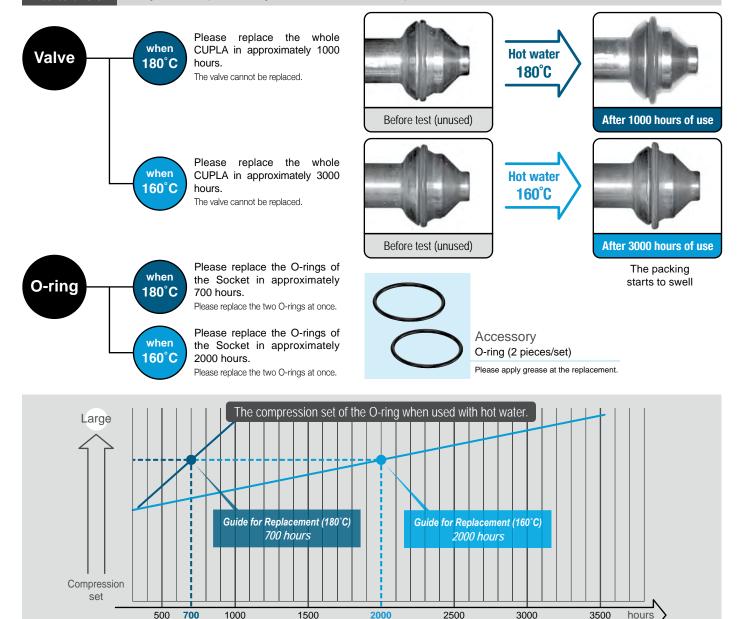

HOT WATER CUPLA HW Type WAF : WAF stands for width across flats.

Approximate time for Valve / O-ring replacement

*Test results by us

Test conditions • Testing device: Mold temperature controlling machine • Fluid: Clean water • Test temperature: 160°C, 180°C • Test condition: Continuous test with the CUPLA connected

∕∆Caution

*Hot water continuous flow test by a mold temperation controller Valve: For continuous use of 3000 hours at 160°C / 1000 hours at 180°C

O-ring: For continuous use of 2000 hours at 160°C / 700 hours at 180°C

Although we have confirmed that there is no leakage, it is our experimental value and not a guaranteed value. Please consider above hours just as a guide. The durability of the seal differs depending on the customers usage conditions. (Number of connection / disconnection, fluid additives, etc.)

• Air will be admixed at the time of connection. Please purge the air by the equipment side when using with hot water.

• If additives are mixed in water or the piping is filled with steam, the lifetime of the seal will be decreased

When using in such an environment, conduct performance evaluation test by actual product.

For Medium Pressure

ZEROSPILL CUPLA

Unique seal design reduces both liquid spillage and air ingress.

- New valve design offers smooth zero-friction movement.
- Push to connect design.
- The variety of body materials, sizes and end configurations has been
 standardized to example with wide some of emploations
- standardized to comply with wide range of applications.
- Automatic shut-off valves in both socket and plug prevent fluid spill out on disconnection.

Reliable zero friction valve

New valve design offers smooth zero-friction movement resulting in reduced chance of malfunction caused by deterioration of valve parts.

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products.

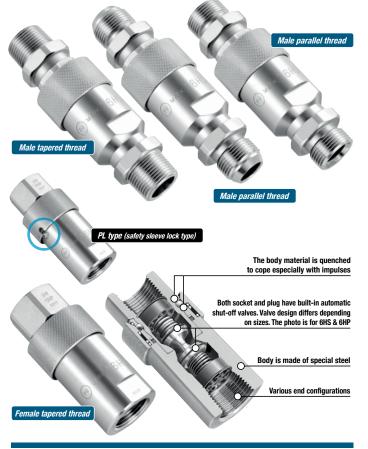

HSP CUPLA

For hydraulic pressure from 14.0 to 20.6 MPa {142 to 210 kgf/cm²}

Special steel body is tough against vibration and impact! Male and female thread end configurations are available. Low pressure loss characteristic suits hydraulic equipment applications.

- Quenched special steel body!
- Powerful impact resistance, especially against impulses.
- Automatic shut-off valves in both socket and plug prevent fluid spill out on disconnection.
- In addition to conventional female thread type, male thread types (male tapered thread, male parallel thread with 30° flare, and male parallel thread with 30° cone-seat) are available. Male thread types are designed especially for direct connection to hydraulic power units effectively.
- Male parallel thread type complies with both metal seal and 0-ring seal. (In case of 0-ring seal, 0-rings available in the market can be used.)
- Optional HSP-DC CUPLA series are available for die-casting machine applications with severe pressure variation.
- The overall length of male thread type is shorter than that of female thread type plus conversion nipple available in the market.
- PL type (Safety sleeve lock type) for 2HS to 8HS (except 66HS) with female thread is also available as standard.

HYPER HSP CUPLA

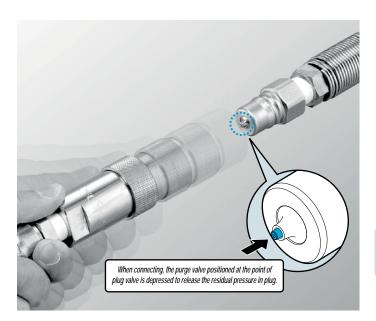

Connects hydraulic piping even with residual pressure up to 20.6 MPa {210 kgf/cm²}

Purge function will set you free from the troublesome residual pressure elimination before connection and let you achieve efficient and frequent hydraulic pipe line coupling.

- Both socket and plug have built-in automatic shut-off valves to prevent fluid spill out when disconnected.
- Interchangeable with standard HSP CUPLA plug or socket in the same size.

Specifications						
Body material	Special steel (Nickel plated)

210 CUPLA

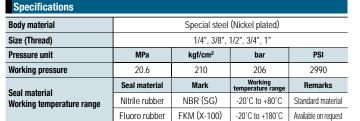

For hydraulic pressure up to 20.6 MPa {210 kgf/cm²}

Standard hydraulic CUPLA for general purposes with a working pressure up to 20.6 MPa.

Low pressure loss, suitable for hydraulic equipment.

- General purpose hydraulic CUPLA with a working pressure of 20.6 MPa {210 kgf/cm²}.
- Structure is designed to reduce pressure loss to the lowest, and is best for hydraulic applications that need big flow rates.
- Both socket and plug have built-in automatic shut-off valves that prevent fluid outflow when disconnected.

Maximum Tightening Torque Nm {kgf•cm}								
Size (Thread)	1/4"	3/8"	1/2"	3/4"	1"

Application Example

HSU CUPLA

Stainless steel CUPLA for high pressure up to 21.0 MPa {214 kgf/cm²}

The flow volume is increased by between 14 to 44% while at the same time the coupled length is reduced by at least 10% compared with the S210 CUPLA.

- Body material is excellent corrosion resistant stainless steel (SUS304).
 Suitable for use in tough / harsh environments such as offshore applications.
- Sleeve stopper mechanism can be engaged by rotating sleeve after connection.
- Despite having a stainless steel body, the working pressure, 21.0 MPa, of HSU CUPLA is comparable to that of special steel body CUPLA such as HSP CUPLA series.
- Both socket and plug have built-in automatic shut-off valves that prevent fluid outflow on disconnection.
- Hydrogenated nitrile rubber (HNBR) is used as a seal material for wide variety of liquids.

Specifications

Sleeve Stopper Mechanism

dala and Di

Easy to operate sleeve stopper mechanism enhances operator safety.

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products.

S210 CUPLA

Stainless steel CUPLA for high pressure up to 20.6 MPa {210 kgf/cm²}

Stainless steel for excellent corrosion resistance! The unique "inner seal mechanism" accepts a working pressure up to 20.6 MPa.

- Body material is excellent corrosion resistant stainless steel (SUS304). Suited for use in tough conditions such as ocean development.
- Although it is made of stainless steel, the unique "inner seal mechanism" enables the working pressure of 20.6 MPa {210 kgf/cm²}, the same as special steel's.
- · Safety lock (accidental disconnection prevention mechanism) ensures tight and secured connection under vibration or impacts.
- · Both socket and plug have built-in automatic shut-off valves that prevent fluid outflow on disconnection.

S210 CUPLA

280 CUPLA

For hydraulic pressure up to 27.5 to 31.5 MPa {281 to 321 kgf/cm²}

Generic CUPLA copes with high pressure lines in hydraulic equipment! Low pressure loss is ideal for hydraulic equipment.

- Conforms to international standard ISO 7241-1A.
- General purpose hydraulic CUPLA with the working pressure up to 27.5 to 31.5 MPa {281 to 321 kgf/cm2}.
- · Structure keeps pressure loss extremely low, particularly ideal for hydraulic applications requiring high flow rates.
- · Both socket and plug have built-in automatic shut-off valves to prevent fluid spill out when disconnected.
- · Special steel body material is adopted for its excellent strength and additional quenching treatment is done to withstand hydro pressure impacts.

FLAT FACE CUPLA F35

For hydraulic pressures up to 35.0 MPa {357 kgf/cm²} with flat contact face

Flat contact face design reduces spill upon disconnection.

- Flat contact face design makes it easy to clean dust and foreign matter adhered on the surface of coupling so as to prevent them from entering inside and thus causing faulty operation of connection or disconnection.
- Flat contact face design minimizes air admixture during connection to keep the possible malfunction of equipment caused by the air bubbles in the hydraulic line at minimum level.
- Push-to-connect operation.
- Sleeve stopper mechanism is engaged by rotating sleeve after connection. It prevents
 accidental disconnection even when vibration or impact is applied to the CUPLA.
- The special design reduces pressure loss considerably, and especially suited to hydraulic applications in which big flow is needed. Both socket and plug have built-in automatic shut-off valves that prevent fluid spill out on disconnection.

Application Example

FLAT FACE CUPLA

For hydraulic pressure up to 35.0 MPa {357 kgf/cm²} with flat contact face

Compared with Nitto Kohki's conventional 35 MPa CUPLA, the flow volume is increased 1.5 to 2 times.

*Increase ratio of each flow volume depends on the CUPLA size.

- "Airless valve shut-off" design minimizes spillage volume on disconnection and admixture volume of air on connection.
- Best suited for hydraulic lines with drastic high pressure pulsation such as in die-casting machines.
- Sleeve stopper design preventing accidental disconnection under vibration or impacts enhances workability and safety.
- Sizes are Rc 3/8, Rc 1/2, Rc 3/4, and Rc 1. *Only the same size of socket and plug can

Offset concave flat face enables quick and smooth connection

Unique flat face design

Concaved offset for the flat face on socket guides plug for quick and smooth centering and connection, but still easy to wipe off dirt and dusts.

450B CUPLA

For hydraulic pressure up to 44.1 MPa {450 kgf/cm²}

Metal-touch valve system with superior durability! Sleeve stopper mechanism gives secure connection.

- CUPLA for higher working pressure up to 44.1 MPa {450 kgf/cm²}.
- Sleeve stopper mechanism can be engaged by rotating sleeve after connection.
- Both socket and plug have metal-touch automatic shut-off valves that prevent fluid spill out on disconnection.

For Multi-Port Connection (Manual)

MULTI CUPLA МАМ Туре

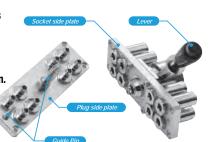

Multiple air port system

Simultaneously connects several ports securely in one operation! Greatly cuts cycle time in multiple ports replacement.

- · Handles several ports at once.
- Simple action with lever enables easy connection / disconnection manually.
- · Comes with lock mechanism to prevent accidental disconnection
- · Valve on socket side only.

WAF : WAF stands for width across flat Application (Thread): R 1/8 Mass: 350 g (Plug), 800 g (Socket)

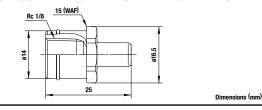

Model MAS-1TP (Individual CUPLA) Plug

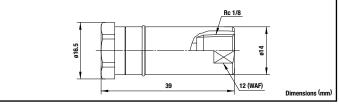

• Can be mounted on model MAM-1TP-4/MAM-1TP-8/MAM-1TP-12/MAM-1TP-16.

Socket Model MAS-1S (Individual CUPLA)

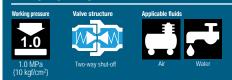

- Application (Thread): R 1/8 Mass: 33 g
- Can be mounted on model MAM-1S-4/MAM-1S-8/MAM-1S-12/MAM-1S-16.

For Multi-Port Connection (Manual)

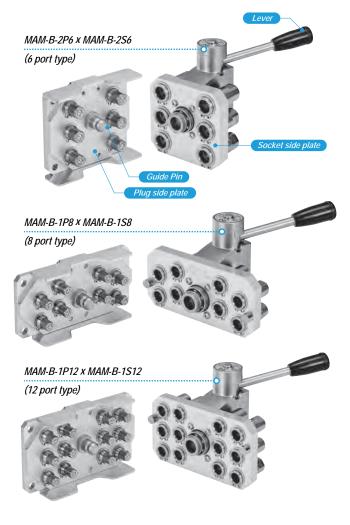

MAM-B Type

Multiple port system

Simultaneously connects several ports securely in one operation. Greatly reduces changeover time in multiple ports replacement.

- Handles several ports at once.
- Simple manual lever action completes easy connection / disconnection.
- Two-stage lever operation prevents CUPLA from accidental dropping due to sudden detachment.
- Comes with lock mechanism to prevent accidental disconnection.
- Large flow equivalent to that of SP CUPLA Type A.
- Two kinds of plates are available for each size.
- Automatic shut-off valves in both socket and plug prevent fluid spill out on disconnection.
- Self-aligned valve design provides safety sealing of individual socket or plug when disconnected.

 Flow Rate - Pressure Loss Characteristics

 [Test conditions]
 •Fluid : Water
 •Temperature : 25°C±5°C

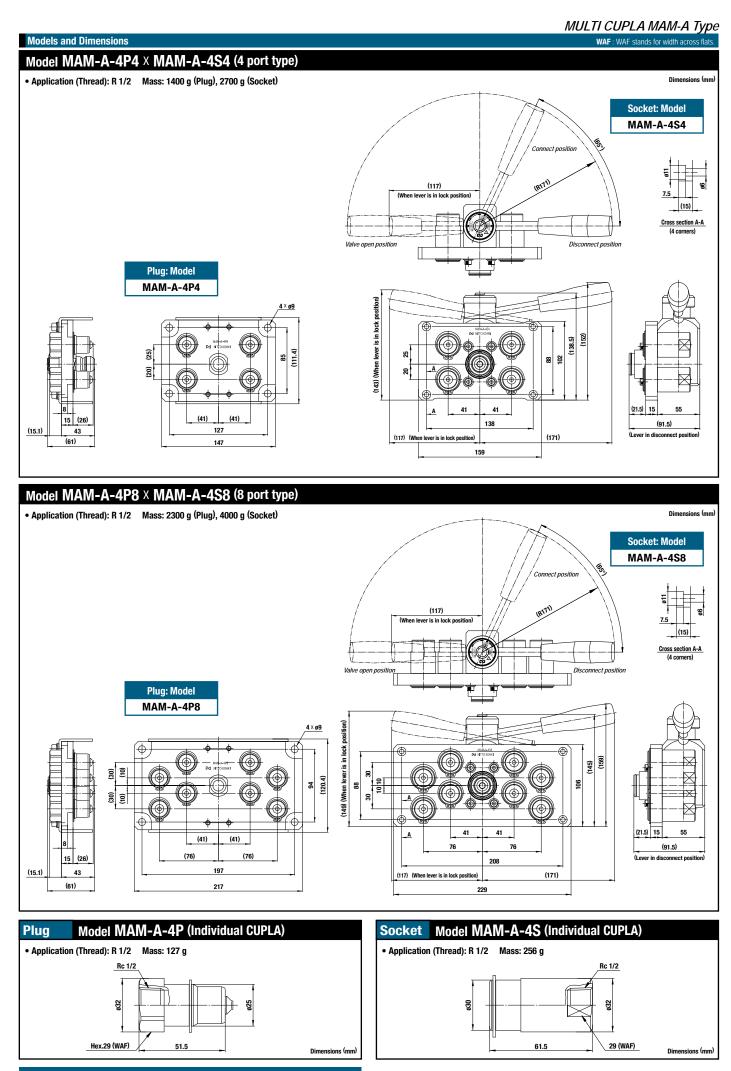

Per port of CUPLA

Before use, please be sure to read 'Safety Guide' described at the end of this book and 'Instruction Sheet' that comes with the products.

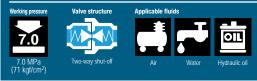

Made-to-order MULTI CUPLA are available on request, such as a combination of different sizes on the flange plate.

For Multi-Port Connection (Automatic)

MULTI CUPLA MAS Type / MAT Type

7.0 MPa {71 kgf/cm²} general purpose type

Connects multiple lines simultaneously with a single operation for different fluids and sizes.

- Ideal for automated hydraulic or pneumatic cylinder operated systems that need to connect and disconnect several lines simultaneously.
- Automatic shut-off valves in both sockets and plugs ensure no outflow of fluid on disconnection.
- Body materials other than stainless steel are available, which can be ordered with or without valves (made-to-order products).
- Snap ring and screw thread-in types to mount on the base plate are standardized.
- MAS type can accept axial eccentricity between socket and plug. The allowance of eccentricity is within the radius range of 0.3 mm.
- * CUPLA connection or disconnection with fluid under dynamic pressure cannot be made.

Maximum Ti	ghtening Torc	Ν	lm {kgf∙cm}		
Size (Thread)	1/4"	3/8"	1/2"	3/4"	1"
Torque (MAS type)	14 {143}	22 {224}	60 {612}	90 {918}	120 {1224}
Size (Thread)	M20	M24	M30	M39	M45
Torque (MAT type)	50 {510}	50 {510}	50 {510}	70 {714}	80 {816}

Interchangeability

MAS & MAT or MAS & MAS types of the same size are to be connected.
Connection between the same MAT types is virtually not possible because there is no allowance for eccentricity.

Minimum Cross-Sectional Area (mm²)					
Model	2SP	3SP	4SP	6SP	8SP
Min. cross-sectional area	23	41	76	145	224

MULTI CUPLA

MALC-01 Type for Low Pressure Use

One-way shut-off type for Low pressure use

Solo use of socket is possible. Suitable for operation of ejector pins to open / close valve gates in molding.

- Solo use of socket is possible.
- As in the case of MULTI CUPLA MALC-SP type and MALC-HSP type, the distance between the socket plate and the plug plate is designed to be 30 mm when connected. This means the MULTI CUPLA MALC-01 type can also be installed mixed with any size of MALC-SP type and MALC-HSP type on the same plate.
- An axial eccentricity allowance of 2 mm eliminates precise centering at installation.
- Compact size with " thread screw mount " and "with flange" types available.

Flange	1.5 {15}

Interchangeability

Sockets and plugs can be connected regardless of end configurations.
Not interchangeable with MALC-SP Type (for medium pressure use) MALC-1SP or MALC-HSP Type (for high pressure use) MALC-1HSP.

Minimum Cross-Section	(mm²)	
Minimum cross-sectional area	28	

Suitability for Vacuum

Not suitable for vacuum application in either connected or disconnected condition.

Load Required to Maintain Connection When Line Is Pressurized

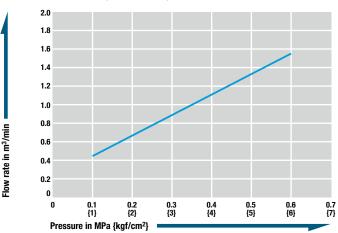

$F = (P \times 160) + 50 \{ f = p \times 1.6 + 5 \}$

Minimum load required to maintain connection F [N] {f [kgf]} Actual value of pressure P [MPa] {p [kgf/cm²]}

Assign the actual value of pressure [P (MPa), p (kgf /cm²)] to the above formula. Maintain the connection with this load [F (N), f (kgf)] or more. However, the maximum acceptable load is 500 N {51 kgf}.

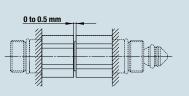

Pressure - Flow Characteristics

[Test conditions] • Fluid : Air • Temperature : Room temperature

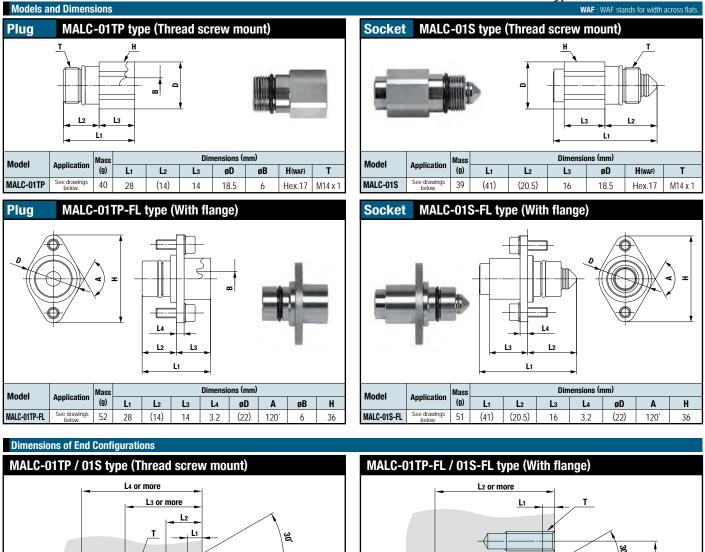

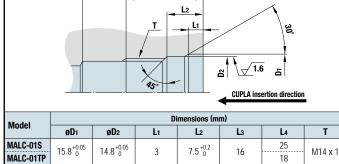

Acceptable distance between plates

Socket and plug or plate must be used in contact with each other. Maximum 0.5 mm distance between socket and plug or plate is acceptable.

MULTI CUPLA

MALC-SP Type for Medium Pressure Use

Low spill type for medium pressure use

A single operation enables simultaneous connections of multiple lines. A special design for medium pressure use minimizes air admixture in fluid lines upon connection.

- Compared with conventional MULTI CUPLA, approximately double flow rates are realized. This could reduce the size of required plates. (Rate of flow increase depends on CUPLA sizes.)
- The MALC type realizes a 2 mm axial eccentricity allowance, while the conventional MULTI CUPLA is only 0.6 mm.
- Special valve design enables connection of socket and plug under pressure of up to 2 MPa. (up to 1.5 MPa for MALC-12SP.)
- When connected, the distance between the socket plate and the plug plate is designed to be 30 mm for all sizes. This means that any size of CUPLA can be mounted and used on the same plate.
- Low spill valves minimize outflow of fluid and admixture of air into the fluid line.

For Multi-Port Connection (Automatic)

MULTI CUPLA

MALC-HSP Type for High Pressure Use

Low spill type for high pressure use

A single operation enables simultaneous connections of multiple lines. A special design minimizes air admixture in fluid lines upon connection. Suitable for high pressure hydraulic circuits.

- Compared with conventional MULTI CUPLA, approximately double flow rates are realized. This could reduce the size of required plates. (Rate of flow increase depends on CUPLA sizes.)
- The MALC type realizes a 2 mm axial eccentricity allowance, while the conventional MULTI CUPLA is only 0.6 mm.
- Special valve design enables connection of socket and plug under dynamic pressure of up to 8 MPa.
- When connected, the distance between the socket plate and plug plate is designed to be 30 mm for all sizes. This means any size of CUPLA can be mounted and used on the same plate.
- Low spill valves minimize outflow of fluid and admixture of air into the fluid line.

127 NITTO KOHKI CO., LTD. CUPLA

SEMICON CUPLA SP Type For semiconductor manufacturing production installation 0.2

General purpose type with stainless steel body and rubber seal. **Electro-polished body for enhanced** corrosion resistance.

- Body and valve springs are stainless steel (SUS304). Body is electro-polished for enhanced corrosion resistance.
- Seal materials can be selected to suit your fluid and application, to flexibly comply with your semiconductor production process requirements.
- All components are cleaned, assembled, inspected, and then packed in a clean room.
- Grease free. No grease is applied to the seal material.
- Each plug comes with a dust cap.
- · Stainless steel SUS316 body and valve springs are available as made-to-order products.

SERVICON CUPLA SCY Type For semiconductor manufacturing equipment

Fluorine contained resin packing seal and perfluoroelastomer packing seal are used to reduce required connection load and to achieve tight sealing.

- The material of body and spring are of stainless steel (SUS304), while that of valve is of fluorine contained resin. The combination shows excellent performance with various types of chemicals.
- Body (SUS304) is electropolished for enhanced corrosion resistance.
- All components are cleaned, assembled, inspected, and then packed in a clean room.
- Grease free. Grease is not applied to the seal materials.
- Flanged body makes it easy to operate even with gloves.

Flow Rate – Pressure Loss Characteristics

[Test conditions] • Fluid : Water • Temperature : 20°C±5°C

SEMICON CUPLA SCT Type For semiconductor manufacturing equipment

Polytetrafluoroethylene (PTFE) is utilised for the body.

- Polytetrafluoroethylene (PTFE) body gives excellent resistance to chemicals.
- Both socket and plug have built-in automatic shut-off valves that prevent fluid from outflowing when disconnected.
- No dissolution of metal ions from part in contact with liquid ensures excellent reliability.
- All components are cleaned, assembled, inspected and then packed in a clean room.
- Appropriate model can be selected form a wide variety of sizes to suit your application / fluid.
- Optional keyway lock to prevent incorrect connection. 10 keyway patterns are available.

Specifications	6						
Body material			Polytetrafluoroethylene (PTFE)				
Size (Thread)		1/4", 3/8", 1/2", 3/4", 1" 1/4-18NPT, 3/8-18NPT, 1/2-14NPT, 3/4-14NPT, 1-11.5NPT

* Available end configurations are female ISO Rc thread and female NPT thread.

SCT-8P-NPT

* Plug or socket with female ISO Rc end configuration has V-groove on the body as identification. (In case of female NPT thread, no V-groove on either plug or socket body).

1-11.5NPT

* Please inquire for other end configurations other than female thread (e.g. flanged or male thread).

SEMICON CUPLA SCAL Type

For semiconductor manufacturing equipment

Body is polytetrafluoroethylene (PTFE).

- Polytetrafluoroethylene (PTFE) body gives excellent resistance to chemicals.
- Unique seal design ensures minimal liquid spill.
- Both socket and plug have built-in automatic shut-off valves that prevent fluid from outflowing when disconnected.
- No dissolution of metal ions from part in contact with liquid ensures excellent reliability.
- Push-to-connect design.
- Flanged socket body makes it easy to push down sleeve even when wearing gloves.
- All components are cleaned, assembled, inspected and then packed in a clean room.
- Concaved surface of the plug end prevents liquid loss and protects the plug seal surface from damage if dropped or hit.
- To prevent incorrect connection, a keyed type sleeve is available on a made-to-order basis.

Made-to-order item

Flange type

 Ten key angle positions are available. The appearance of the keyed type body slightly differs from that of the standard type.

Models and Dimension

Specifications **Body material** Polytetrafluoroethylene (PTFE) 1/4", 3/8", 1/2", 3/4", 1" Size (Thread) 1/4-18NPT, 3/8-18NPT, 1/2-14NPT, 3/4-14NPT, 1-11.5NPT Pressure unit MPa kgf/cm² bar PSI Working pressure 02 20 2 2 Seal material Mark Remarks Socket Seal material 0-rina Perfluoroelastomer Ρ +5°C to +50°C Standard material Working temperature range Fluoropolymer resin (PFA) Valve

Maximum Tightening amount (approximate) With seal tape wrapped on the male thread, screw it firmly by hand, and then add more tightening

with a wrench as shown below.

$1\frac{3}{4}$ to 2 turns	1/4" · 3/8" · 1/2" · 3/4" · 1" Size

Whichever method, overtightening may damage the thread and cause leakage, so take extra care.

Interchangeability

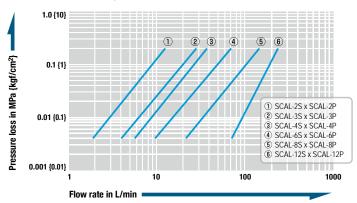

Sockets and plugs can be connected regardless of end configurations if the number \Box in the model name {SCAL- \Box S (P)} is the same.

*Made-to-order item

• Plug comes with a cap made of high density polyethylene (HDPE). • Outer appearance of NPT thread type differs slightly from that of the above

Please contact us about end configurations other than female thread such as flange and male thread.
 Excessive tightening will damage the threaded part and result in leakage.

• Note: A very small amount of gas can permeate polytetrafluoroethylene (PTFE) bellows in the socket.

SEMICON CUPLA SCF Type For semiconductor manufacturing equipment

All plastic model. Fluoropolymer resin (PFA) body.

- All parts made of fluoropolymer resin. O-rings in particular are FEP-covered fluororubber with excellent chemical resistance and no rubber elution.
- To connect with a plug, just push the socket on to it. Disconnection is done in simple and one-handed button operation.
- Unique "double lock mechanism" prevents accidental disconnection of socket and plug.
- Branched tube port improves operability and reduces required piping space.
- Plugs come with a dust cap.

Tube insertion port

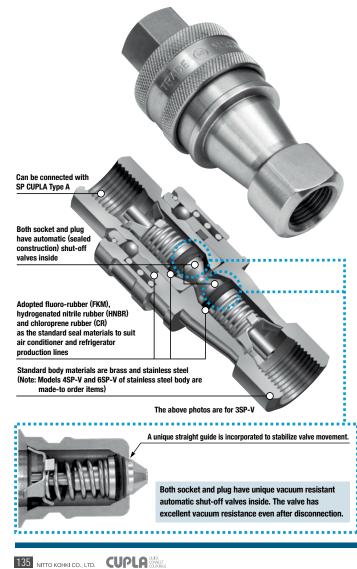

For Inert Gas and Vacuum

SP-V CUPLA

Automatic shut-off valves in both socket and plug for vacuum applications. Each can withstand a vacuum of as high as 1.3 x 10⁻¹ Pa even when disconnected.

- Uses automatic shut-off valves with ultra-tight sealed construction in both socket and plug. Ideal for vacuum applications.
- Having automatic shut-off valves in both socket and plug facilitates easy fluid handling. Suitable for a wide range of vacuum applications as high as 1.3 × 10⁻¹ Pa {1 x 10⁻³ mmHg} even when disconnected.
- Three types of seal material are available to suit any of the diversified production lines for air conditioners, refrigerators or similar.
- Can be connected with SP CUPLA Type A.

Seal Materials for Refrigerants

Various eco-friendly refrigerants for air conditioner and refrigerator have been developed. Nitto Kohki, having invested years in the research and development of excellent seal materials to withstand refrigerants and refrigerant oils, has made early attempts to develop and manufacture the seal materials for these eco-friendly refrigerants.

	Seal material							
	Hydrogenated nitrile rubber	Chloroprene rubber						
Mark	HNBR (H708)	CR (C308)						
Features	Resistant to hydrofluorocarbons (HFC-134a, HFC-407C, HFC-410A, HFC-404A), and PAG type and ester type oils. Also resistant to heat up to 120°C	Excellent resistance to hydrofluorocarbons (HCFC-22 and HFC-134a)						
Application	Refrigerator production lines Air conditioner production lines	Air conditioner production lines						

Socket Female thread н Mass (g) Dimensions (mm) Application (Thread) Model øD H(WAF) Brass Stainless stee L Т 2S-V R 1/4 58 (28) 19 Rc 1/4 136 127 3S-V R 3/8 217 197 65 (35) 21 Rc 3/8 4S-V R 1/2 421 393 72 29 45 Rc 1/2 6S-V R 3/4 709 658 88 55 35 Rc 3/4

The sleeve shape of 4S-V and 6S-V differs from that of the above photo.

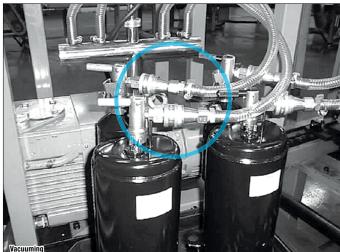

Comparison of External Appearance

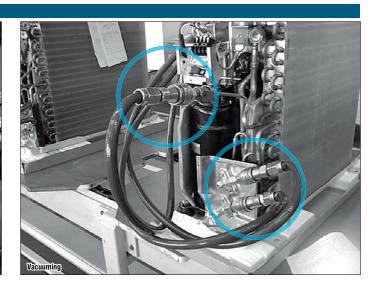

When two different gases are used simultaneously in the production lines, SP-V-GN type and SP-V-GNN type (non-interchangeable with standard SP-V and each others) may be required in order to prevent connections to improper lines by mistakes. They are made-to-order items. For details please contact Nitto Kohki direct or its distributor in your country.

× indicates incompatibility.

Application Example

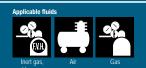

PCV PIPE CUPLA

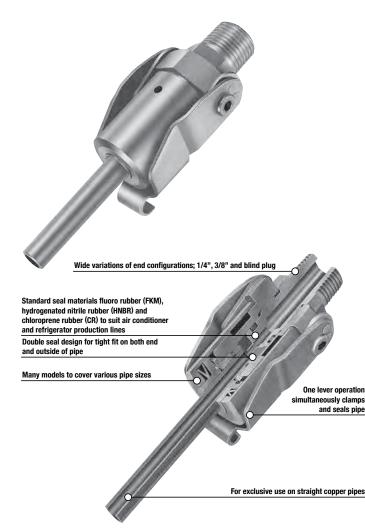

For connection to copper pipes

Clamps directly on straight copper pipes ! Double seal construction withstands a vacuum of up to 1.3 x 10⁻¹ Pa.

- Clamps directly on to straight copper pipes eliminating unnecessary welding or flaring.
- Withstands a vacuum of up to 1.3 x 10⁻¹ Pa (when connected) making it possible to be used in leak testing, vacuum suction and refrigerant charge.
- Select from three standard types of seal materials to be used with fluids for air conditioner and refrigerator production lines. Many models to suit various pipe sizes.
- One lever operation simultaneously clamps and seals pipe. Double seal construction for tight fit on end and outside surface of pipe ensures excellent sealing and vacuum resistance.

 * Available on request

Clamping Mechanism

When the lever is pushed down, the sleeve moves in the direction of the arrow, and at the same time actuates the chucks to grip the copper pipe firmly and provide a tight seal.

Application Example

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products.

For Paint

PAINT CUPLA

Piping for painting equipment

Quick connection and disconnection of paint spray gun and paint fluid line is realized.

- Unique swing connection system enables easy connection and disconnection of paint spray gun and paint hose even by gloved hands.
- Full-open gate valve mechanism prevents paint precipitate buildup.
- Adoption of special resin seal that has resistance against solvents made it
 possible to feature superior durability, long stable capability, and easy
 cleaning of paint spray gun after the job.
- · Connection and disconnection can be made even if paint sticks to the socket sleeve.
- Small and lightweight design (80 g per set) reduces the weight to be held by hand of operators.
- Built-in sleeve lock mechanism prevents accidental disconnection of CUPLA, ensuring safe operation.
- · Wide variety of end configurations

Solves the troubles of ferrule joints by the effortless operation unique to CUPLA. Easy disassembly and cleanability help in hygienic management of HACCP.

- It can be connected by just inserting the plug to the socket and twisting the "Safety lock".
- . The "Safety lock" feature ensures that there can be no unintentional disconnection of the coupling.
- O-rings that conforms to the Food sanitation Act of Japan is adopted.
- · An operator friendly design. Seal parts will not drop off during connection like conventional fittings.
- Stainless steel (JIS SUS316L equivalent) for the liquid contact parts, and finished with buffing (#400).

Smart Connect and Disconnect

Specifications								
Body material	Stainless steel [SCS16 (JIS SUS316L equivalent)] *1							
Surface finish of the liquid-contact part	Buff finish #400							
Size of end configurations	Welding	g type *2	Ferrule type *3					
Size of child configurations	1.5 S / 2.0 S							
Pressure unit	MPa	kgf/cm ²	bar	PSI				
Working pressure	1.0	10	10	145				
	Seal material	Mark	Working temperature range	Remarks				
Seal material *4	Silicone rubber	SI	0°C to +110°C	Standard material				
Working temperature range	Fluoro rubber	FKM (X-100)	0°C to +180°C	Available on request				
	Ethylene-propylene rubber	EPDM (EPT)	0°C to +150°C	Available on request				
0-ring size	1.5 S: P38, 2.0 S: P50 (Dimensions, tolerance: refer to JIS B 2401, Hardness: A70±5)							

All metal parts are equivalent to SUS304 except those exposed to liquid contact.

The dimensions of the weld zone conform to JIS G 3447 stainless steel sanitary pipe Please use ferrule couplings conforming to IDF / ISO 2852. *2:

*3:

*4: The seal material conforms to article No.3-D-3-(1) Rubber utensils (except nursing utensils) or Containers / Packages. It has passed both material and elution tests specified in the Food sanitation Act and the standards for Food and Food additives (Notice No.370 of 1959 issued by the Ministry of Health and Welfare of Japan). Conforms to standard No.21CFR 177.2600 of the US Food and Drug Administration (FDA)

Flow Direction

Fluid flow can be bi-directional when socket and plug are connected.

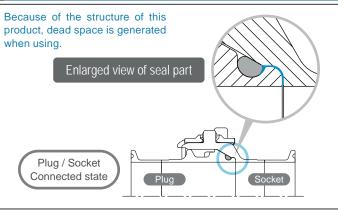

Interchangeability

Sockets and plugs can be connected regardless of end configurations if the size is same.

Suitability for Vacuum Vacuum pressure: 53 k					
Socket only	Plug only	When connected			
-	_	Operational			

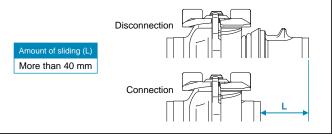

Vacuum performance may vary depending upon working environment and usage conditions.

Seal part (cross section)

When installing the CUPLA on the pipe

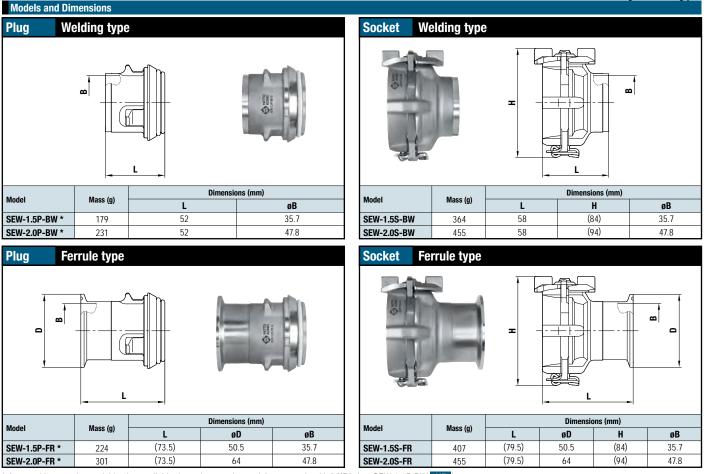

Connection and disconnection of socket and plug is enabled by sliding either the socket or plug to the central axis of pipe. When connecting the CUPLA to the pipe, ensure that there is at least minimum moving distance (L) in the axial direction

HACCP: Hazard Analysis and Critical Control Point

HACCP is the management system in which food safety is addressed to the process from production, procurement and handling of raw materials to distribution and consumption of finished products through the analysis and control of biological, chemical and physical hazards.

HYGIENIC CUPLA Easy Wash Type

* A type without seal material is also available. In such case, the model name ends with "-NP". (ex: SEW-2.0P-BW -NP

Applications

Easy assembly and disassembly

No tools are required to disassemble / assemble HYGIENIC CUPLA. Small number of parts that are easy to handle, aiding efficient maintenance.

Construction and Safety standards

Since the O-Ring is attached beforehand, it will not drop off during connection like conventional fittings. And the seal material conforms to article No. 3-D-3-(1) Rubber utensils (except nursing utensils) or Containers / Packages. It has passed both material and elution tests specified in the Food sanitation Act and the standards for Food and Food additives (Notice No.370 of 1959 issued by the Ministry of Health and Welfare of Japan). Also conforms to standard No. 21 CFR 177.2600 of the US Food and Drug Administration (FDA).

Easy washing of the whole unit

After disassembly, small number of components requires minimum effort when cleaning. No small parts to lose.

See page 150 for the details.

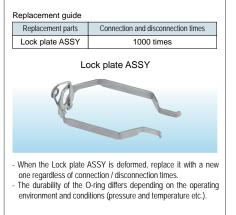

Safety Lock function

As a safety measure, the "Safety lock" feature ensures that there can be no unintentional disconnection of the CUPLA. By turning the cam handle, you can maintain the connected state of the socket and plug.

Consumables

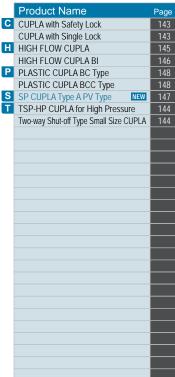

The O-ring and Lock plate ASSY are consumable items. See the following list as a replacement guide for the Lock plate ASSY.

Semi-Standard CUPLA Series

Index

CUPLA with Single Lock CUPLA with Safety Lock

Accidental disconnection prevention mechanism

The standard CUPLA series listed on the lower right can have an additional single lock or a safety lock mechanism to prevent accidental disconnection.

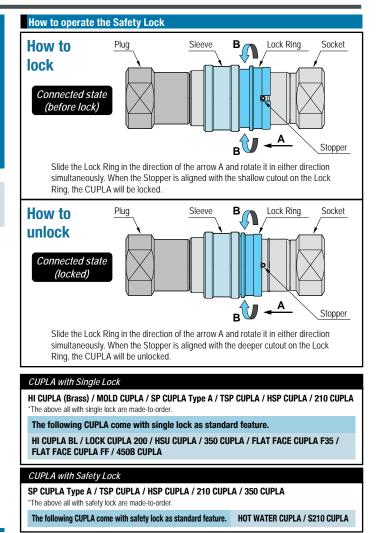

• CUPLA with Single Lock

The sleeve is provided with a cutout and the body of the socket has a projecting lock pin or ball. After connecting the CUPLA, simply turn the sleeve to lock the back and forth movement of the sleeve.

CUPLA with Safety Lock

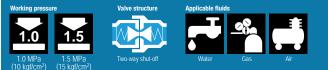

A sleeve stopper Lock Ring is provided behind the sleeve. After connecting the CUPLA, simply turning the Lock Ring to disable the back and forth movement of the sleeve (see diagram sketch on the right top).

Two-way Shut-off Type Small Size CUPLA

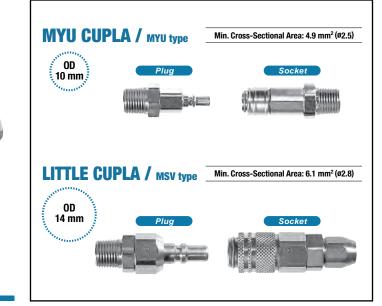

For temperature controllers

- Push-to-connect operation.
- Both socket and plug have built-in automatic shut-off valves to prevent fluid spill out when disconnected.
- Easy connection even in a restricted area.
- Lightweight feature will allow you easy design of multiple piping.

WAF : WAF stands for width across flats.

Plug TPM type (Male thread)

 \triangle Precautions for use

\land Warning

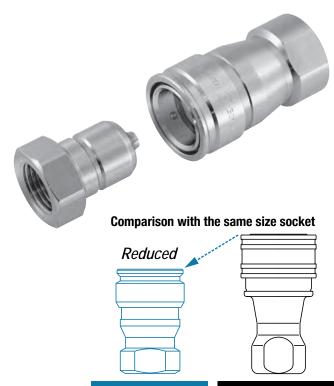

Do not connect with standard TSP CUPLA (Page 77 to 80).

HIGH FLOW CUPLA

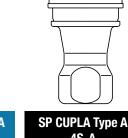

Drastically increases flow volume while minimizing pressure drop.

- Both socket and plug have built-in automatic shut-off valves.
- High flow rate type to increase cooling effect.
- Quick connection and disconnection of cooling pipes.
- Compact and space-saving design. Compared with the coupled length of SP CUPLA type A, that of HIGH FLOW CUPLA is reduced by 22%.
- Installation and maintenance can be done within a short time.

HIGH FLOW CUPLA BI Type

CUPLA with ferrule flange for piping of water and fluids for temperature control

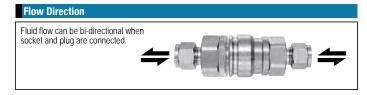

HIGH FLOW CUPLA and ferrule flange are combined to achieve efficient piping.

- Easy connection with stainless steel pipe.
- · Connection to plastic hose is possible with optional hose connection kit.
- Connection to various tubes is also possible via the use of appropriate optional inserts.

SP CUPLA Type A PV Type

For Medium Pressure / Connectable with residual pressure With Purge Valve

Equipped with residual pressure eliminating valve (up to 1 MPa).

- · Automatic shut-off valves in both socket and plug prevent fluid spill out on disconnection.
- · Smooth connection even when there is residual pressure when connecting.
- No residual pressure eliminating operation required on your piping. Just connect to purge the remaining pressure.

Safety Guide: This product can be connected under residual pressure, but do not connect under dynamic pressure applied. It may lead to incomplete connection, deteriorated durability or possible valve fly out. Read without fail and observe the "Instruction sheet" that comes with the product and the following pages in the general Quick Connect Coupling Catalog; [Precautions Relating to the Use of All CUPLA] and "CUPLA for Low Pressure (Water, Liquid) and for Medium Pressure" in the [Safety Guide] page.

PLASTIC CUPLA BC Type Valveless

For low pressure air piping

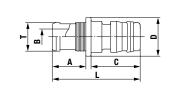

- To connect, just push the plug into the socket.
- Plastic makes this ideal for use in environment prone to rusting.
- Compact and light weight for easy handling.
- Valveless construction gives more stable flow.

DIP MOLD DUST CAP

Dust caps for HI CUPLA, SP CUPLA Type A, TSP CUPLA, and HYDRAULIC CUPLA

PVC Dust Caps produced by dip molding are available for HI CUPLA, SP CUPLA Type A,

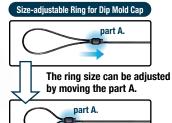

TSP CUPLA, and HYDRAULIC CUPLA. Dust Caps prevent dust from getting inside the fluid line and protects the sealability and life of the O-ring.

Caution: The function of the cap may be damaged due to fluid adhering to the CUPLA or due to the external environment. Wipe off the fluid from the CUPLA to prevent the fluid from adhering.

Metal caps for HI CUPLA Series, SP CUPLA Type A, TSP CUPLA and HYDRAULIC CUPLA

(Semi-standard)

• Metal Cap equipped with dust-proof and leak prevention function.

• Caps with metal material corresponding to that of CUPLA body are available.

Model	Applicable CUPLA	Sales unit		
Model name of Safety Cap is stated in the following manner. Model= CUPLA Model (normal CUPLA) + SD (safety cap)		Example:"2S-A-SD" identifies a safety cap for SP CUPLA Type A Model 2S-A.	Sockets and plugs for HI CUPLA, SP CUPLA Type A, TSP CUPLA, HSP CUPLA, 210 CUPLA, S210 CUPLA, 350 CUPLA, 450B CUPLA and SP-V CUPLA	1 pc.

149 NITTO KOHKI CO., LTD. CUPLA DUEX

When ordering, please indicate Model Name or part number. Semi standard items: As these items are not always in stock, delivery time is subject to confirmation.

See page 149 for the details of Dip MOLD DUST CAP and SAFETY CAP for HI CUPLA.

When attached

DUST CAP

Plastic Cap for HI CUPLA Series

• Dust caps prevent dust from getting inside CUPLA.

Part number	Model	Applicable CUPLA	Sales unit	Material	
0012424	206 D	Sockets for 20/30/40 type HI CUPLA Series	1	Delwinyl chlorida (DVC)	
CQ12434	20S-D	Note: Dust caps cannot be attached to the sockets for FULL- BLOW CUPLA, 400/600/800 type of HI CUPLA and HI CUPLA ACE.		Polyvinyl chloride (PVC)	

Dedicated polyethylene cap for HYGIENIC CUPLA

• Dust cap for both plug and socket (made of polyethylene).

The Dust Cap conforms to No. 3-D-2-(1) and 3-D-2-(2)-4 Apparatus and Containers/Packages. It has passed both material and elution tests specified in the standards for Food and Food additives. (Notice No.201 of revised March 31, 2006 by the Ministry of Health and Welfare of Japan)

Model	Size	Applicable CUPLA	Sales unit	Material
SEW-1.5SP-D	1.5S	For HYCIENIC CURLA Rive and Socket	1	Polyvinyl chloride (HDPE)
SEW-2.0SP-D	2.0S	For HYGIENIC CUPLA Plug and Socket	1	Polyvinyi chiolide (HDPE)

SLEEVE COVER

Plastic cover for HI CUPLA Series (5 pcs. per package)

- Easier sliding operation is achieved by attaching an additional plastic cover over the socket sleeve of HI CUPLA Series.
- Plastic covers reduce the risk of damage if the CUPLA strikes other components or products.
- Sleeve covers in various colors allow for easier identification of various air lines.

The SLEEVE COVER cannot be used together with the DUST CAP or DIP MOLD DUST CAP.

For both plug and socket

Part number	Model	Color	Applicable CUPLA		Material
CB23588	SLC-HI-R	Red		5	
CB23590	SLC-HI-B	Blue	For HI CUPLA Series Sockets		
CB23589	SLC-HI-Y	Yellow	Note: Sleeve covers cannot be attached to sockets for the FULL-BLOW CUPLA,	5	Thermoplastic elastomer (TPE)
CB23591	SLC-HI-W	White	400/600/800 HI CUPLA, HI CUPLA ACE, Stainless HI CUPLA and Brass HI CUPLA.		
CB23587	SLC-HI-K	Black		5	

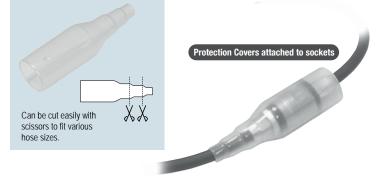

PROTECTION COVER

Plastic Cover for NUT CUPLA and FULL-BLOW CUPLA Nut Type (Semitransparent)

• For NUT CUPLA and FULL-BLOW CUPLA Nut Type.

 Protection cover wraps up the whole CUPLA to absorb impacts and to reduce the risk of damage if the CUPLA accidentally strikes other components or products.
 Protection covers can be out to fit the base diameter which the CUPLA is

- Protection covers can be cut to fit the hose diameter which the CUPLA is connected to.
- Can be attached to either the socket or the plug, and can be used as a dust cap.

Part number	Model	Applicable CUPLA	Sales unit	Material
CB23784	SOC-HI	Can be attached to NUT CUPLA socket or plug (SN type & PN type) and the FULL-BLOW CUPLA socket (SN Type).	1	Polyvinyl chloride (PVC)

ACCESSORIES FOR AIR LINES

Attached to SP CUPLA Type A

Plastic for up to 8S-A for 10S-A to 16S-A

Air Line accessories for HI CUPLA series

Connects directly to 20/30/40 type HI CUPLA sockets.

 Convenient to contro 	l drainage and	pressure in air lines.
--	----------------	------------------------

Part number	Model	CUPLA that accessories can be mounted on	Sales unit	Description
CB23625	DC-30PF	HI CUPLA sockets	1	DRAIN COCK
CB11253	PG-10P	HI CUPLA sockets	1	PRESSURE GAUGE

5 **.EEVE STOPPER**

Sleeve Stopper for SP CUPLA Type A

• Sleeve stopper exclusively for SP CUPLA Type A sockets. Attaching the sleeve stopper after connection of socket and plug locks the sleeve of the socket and prevents unexpected disconnection.

	Part number	Stopper for SP CUPLA Type A socket	Applicable CUPLA	Sales unit	Material		Part number	Stopper for SP CUPLA Type A socket	Applicable CUPLA	Sales unit	Material

RESIDUAL PRESSURE RELEASE JIG

Residual Pressure Release Metal Jig for SP CUPLA Type A and HYDRAULIC CUPLA (Semi-standard)

- · Residual pressure within socket or plug can be released easily by just turning the handle.
- · Residual pressure release jigs are available in two types; socket type for use with plugs and plug type for use with sockets.
- · Connection to sockets or plugs is the same as connection of normal CUPLA.

For sockets For plugs The photos show the jigs for HSP CUPLA.

Model	Attachable CUPLA	Sales unit	
The model name is to be defined in the following manner. ZN – Type of CUPLA to be attached Residual pressure release jig	Sockets and plugs for SP CUPLA Type A, HSP CUPLA, 210 CUPLA, S210 CUPLA, 280 CUPLA and 350 CUPLA	1 pc.

Caution: Since the upper limit of residual pressure that can be relieved depends on the product, please contact us separately

CUPLA ADAPTER for Braided Hose Connection

Mounts on CUPLA plug / socket with female thread

- Adapter for CUPLA with female thread such as ZEROSPILL CUPLA and SP CUPLA Type A.
- No hose clamp is required resulting in reduced risk of injuries to fingers or palms.
- Deterioration of the braided hose at the hose barb part has been eliminated.
- · Unique nut construction increases the pulling load of braided hoses.
- Simply push a braided hose onto the hose barb to the end and tighten the nut until it is flush against the hose barb base.
- No inner parts for conventional braided hose fittings are required. Thus incorrect assembling does not occur.

A tool and a hose clamp are not required.

Please use braided hoses available in the market

Specifications				
Body material		Bra	ISS	
Model	BH90-3M	BH120-4M	BH150-4M	BH190-6M
Size (Thread)	3/8"	1/2"	1/2"	3/4"
Braided hose size	ø9 x ø15 mm	ø12 x ø18 mm	ø15 x ø22 mm	ø19 x ø26 mm
Working pressure *1	Depends u	pon the specification	ns of braided hoses t	to be used.
Working temperature range *1	Depends u	pon the specification	ns of braided hoses i	to be used.

CUPLA CONNECTING JIG

Connecting Jig for large CUPLA

 Smooth and easy connection of large CUPLA by operating a lever.

<u>Ve</u>rsatile

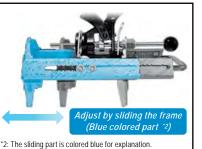

Corresponds to all applicable models $^{-1}$ by adjusting the body length.

*1: Standard CUPLA appearing in the CUPLA general catalog (two-way shut-off valve). Except MULTI CUPLA series. See below list of applicable models.

Functional

The Handle can be used at any angle to prevent interference with the CUPLA.

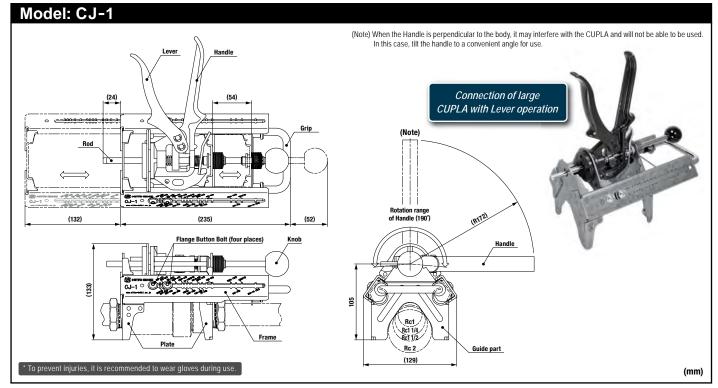

If excessive force occurs during connection, the safety device prevents damage to the body. When the safety device is activated, the connection of the CUPLA is disabled.

4 mm Hexagon wrench, Operation procedure tag, Cable tie

Prior to use, confirm the CUPLA to be connected and adjust it according to the model and size. (See instructions for the adjusting procedures provided with the product)

Models and Dimensions

Seal Material Selection Table for Reference

For seal parts in the CUPLA (the important parts that prevent leaking to the outside), it is important to select the most appropriate seal material to suit the property and temperature of the fluid. It is so important that wrong selection may not only completely malfunction the CUPLA but also cause an unexpected accident.

When the fluid in question is not listed in "Seal Material Selection Table (For reference)," the seal material that you select should be tested under actual environment. Even if the fluid is stated in the following list, the test could be required in some cases.

		Seal Material									Sea	I Mat	erial				
	Fluids	Nitrile rubber	Hydrogenated nitrile rubber	Ethylene-propylene rubber	Fluoro rubber	Perfluoro- elastomer	Silicone rubber	Chloroprene rubber		Fluids	Nitrile rubber	Hydrogenated nitrile rubber	Ethylene-propylene rubber	Fluoro rubber	Perfluoro- elastomer	Silicone rubber	Chloroprene rubber

Seal Material Selection Table for Reference

How to read the selection tables

Fluids

O Practically no harm, and can be used (Excellent) Some harm may be inevitable but can be used under restrictions (Good)

△ Should be avoided if at all possible (Not recommended)

Seal Material

× Should not be used (Unsuitable) Note: Contact us when the space is blank.

Note: When selecting the seal material, please consider the following suggestions carefully: 1. If there is no comment in the column of the fluid name, the condition of the fluid is under saturation at room temperature. Please check with us for applications at a high fluid temperature or with different fluid concentrations.
 For applications related to foods, please order separately specifing the detailed applications.

Body Material Selection Table

 \triangle :Not suitable under certain conditions

○:Suitable

The selection of appropriate body material for the CUPLA is closely related to its usage application, the type of fluid run through, its concentration (%), the pressure, its working environment, etc. So the material must be carefully considered in order to use the CUPLA efficiently and obtain its full performance. Since there are some body materials that should not be used with certain fluids, please refer to this table when making your selection.

CUPLA Inquiry Form

If you are unable to find a CUPLA that you are looking for, or the type that suits your particular requirements in this catalog, please fill in this form and fax it to our distributor in your country or directly to us. We will select the most suitable CUPLA for your applications and contact you directly or through our distributor.

Taper Pipe Threads

UDC 621.882.082.2 JIS Japanese Industrial Standard

This Japanese Industrial Standard specifies taper pipe threads and is applicable to the threads used mainly for pressure-tight joints on the threads for joining pipes, pipe fittings, fluid machinery, etc.

Attached Table: Basic Profiles, Basic Dimensions and Tolerance

Unit: mm

		Gauge dia.		Position of gauge plane				Length of useful thread (min.)									
		Pitch P (Given for reference)	Height of thread h	Radius r or r'	External thread		External thread		Internal thread	thread		Internal thread		Size of carbon steel pipe for ordinary piping			
												When there is incomplete thread part		When there is no	(Given for reference)		
					Major dia.	Pitch dia.	Minor dia.		pipe end	At pipe	Tolerance on <i>D</i> , <i>D</i> 2	From	Taper internal thread	Parallel internal thread	incomplete thread part		
Designation of thread	Number of threads				d	d 2	d1		1	end and D1 of parallel		position of gauge plane	From		Taper internal thread/		
	(in 25.4 mm) n				Internal thread		Gaure	Gauge Axial	Axial	internal thread <u>+</u>	toward larger dia. end	position of gauge plane	From end of pipe or coupler I '	Parallel internal thread	Outer dia.	Thickness	
					Major dia.	Pitch dia.	Minor dia. D 1	length a	tolerance <i>±</i> b	lerance tolerance		f	toward smaller dia. end I	(Given for reference)	From gauge plane or end of pipe or coupler

Production Facilities That Assure Our Product Quality

Large scale production facilities in Tochigi Prefecture, Japan and Ayutthaya, Thailand, having the capability of flexible mass production, are in full operation around the clock and constitute a complete high-grade supply system, from the machining of components to the assembly and testing of finished products, that is forever ready and able to respond to our user's reliance.

Production Facilities Assure Flexible Supply System

TOCHIGI NITTO KOHKI CO., LTD.

Production of CUPLA, Linear-Motor-Driven Piston Pumps and their Applied Products

Tochigi Nitto Kohki factory is accredited under ISO 14001 & 9001.

In November 1995, the Japan Quality Assurance Foundation, authority for inspection and registration, awarded Tochigi Nitto Kohki "ISO 9001" for quality control and quality assurance in the manufacture of CUPLA products (Quick connect couplings) as well as 1kW or smaller Linear Drive air compressors, vacuum pumps and applied products, and in November 2001 "ISO 14001", also awarded International Standard for environment management systems intended to perform global environment preservation and pollution control.

NITTO KOHKI INDUSTRY (THAILAND) CO., LTD.

Production of CUPLA, Air Compressors, and Vacuum Pumps

ISO 14001 & 9001

NITTO KOHKI INDUSTRY (THAILAND) CO., LTD. factory is accredited under ISO 14000 and ISO 9001.

From Development to Production, Management and Marketing of "CUPLA"

Nitto Kohki has introduced the "integrated product assurance system" that can respond promptly to "users' requirements" by covering the range of development, quality control, production and marketing in order to ensure supply of high-performance high-quality "CUPLA".

Nitto Kohki's Integrated Product Assurance System

Research and Development

The needs of the time and the latest information are gathered and analyzed, and unique technology is utilized to the challenge for ceaseless developement of better CUPLA, CUPLA that suggest new applications.

Quality Control

The careful selection of materials, painstaking pursuit of machining precision, and strict surveillance processes such as severe endurance tests have earned trust for our CUPLA as a global brand.

Production

High-grade, rationalized, and integrated production system extends from the machining of parts to the assembly and testing of completed products. Robots that we make ourselves for our own plants and many other state-of-the-art facilities that cannot be seen elsewhere have marvelous capacity for mass production. And with them all, we aim to be an establishment of a flexible supply system.

Tochigi Nitto Kohki factory is accredited under ISO 14001 & 9001.

Marketing

Meticulous marketing activities include advertising in the general industrial press and specialist papers, national and local exhibitions, training sessions, catalogs, promotion videos, other presentation tools and technical data sheets for new launches, and unique yet dynamic campaigns, etc.

Nitto Kohki's Laborsaving Products

Nitto Kohki is capturing the needs of users by introducing to the world not only "CUPLA" quick connect couplings, but also next-generation laborsaving devices, including various "machine tools and hand tools", high precision "Delvo" electric screwdrivers, and linear-motor-driven piston "compressors / vacuum pumps".

Nitto Kohki's Quality Products

Machines and Tools to Achieve Energy and Labor Savings in Processing Work

Machines and tools are used at various processing sites for such work as cutting, polishing, scaling, drilling and chamfering of steel materials. We have created a product line up of pneumatic, electric and hydraulic machines and tools to match the diversification of processing methods and the conditions of work operations.

High Precision "delvo" Electric Screwdrivers for Professional Use

NITTO KOHKI Electric Screwdrivers "delvo" are high-quality tools for professional use, with special emphasis on precise control of torque and long life. They apply just the correct amount of torque –with sure, positive control always at your fingertips. They are smooth and shockless in operation, too.

Compressors, Vacuum Pumps and Their Applied Products

NITTO KOHKI pumps are unique products featuring a linear-motor-driven free piston system. NITTO KOHKI has made available a complete series of air compressors and suction pumps that incorporate this uniquely functional design. These are quite appropriate as air sources or suction power units for various pneumatically operated equipment and apparatus in advanced industries.

Safety Precautions

The safety precautions provide instructions for the safe use of NITTO KOHKI coupling "CUPLA" to avoid the potential danger of bodily harm or damage to surrounding property. The safety precautions are categorized under the headings Danger, Warning and Caution, in accordance with the degree of potential hazard to the body or surrounding property, if CUPLA is used incorrectly. They are all important notes for safety and must be followed as well as in accordance with International standards #1 and other local safety regulations #2.

ISO 4414, Pneumatic Fluid Power - General rules relating to systems #1: ISO 4413, Hydraulic Fluid Power – General rules relating to systems #2: Industrial Health & Safety law (for example)

Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

Indicates a potentially hazardous situation which, if not avoided, may result in personal injury or property damage.

DANGER

Stop using the product immediately if there is any anticipated danger of operation or reduced safety.

WARNING

The enclosed safety precautions are only a guideline. When using CUPLA, you are requested to pay particular attention to possible hazardous situations for the application which are not stated in the safety precautions.

Markings

Caution When Selecting CUPLA

A DANGER

 Connection to a coupling of another brand may cause imperfect connection or disconnection, reduced air tightness, impaired pressure resistance or durability, reduced flow rate and potentially result in an unexpected accident and therefore must be avoided. Nitto Kohki cannot accept liability for any accident that may result by mixed use with the coupling of another brand. Please be sure to check for our marks on the right hand side of this page, which are always inscribed on NITTO KOHKI coupling "CUPLA" when you order and purchase. · Do not use CUPLA under conditions and environments other than specified in the catalog.

A WARNING

- Please consult us prior to use if CUPLA is required for use on machines, equipment or systems (hereafter referred to as "equipment, systems, etc.") for sustaining or controlling human life or body
- · When CUPLA is used for the purpose of ensuring safety, please consult us beforehand.
- The compatibility of the product with specific equipment, systems, etc. must be determined by the person designing the equipment, systems, etc. or the person who decides its specifications based on necessary analysis and test result. The expected performance and safety assurance of the equipment, systems, etc. will be the responsibility of the person who has determined its compatibility with the product.
- · If CUPLA is to be used for the following applications, please consult us:
- Vehicles, aircraft and associated equipment systems that accommodate people
- Medical facilities or suction equipment that directly affects human body
- Equipment that directly comes into contact with and runs food, drugs or medicines, drinking water, atomic energy equipment or equipment that ensures safety.
- Selecting the wrong type of seal material may cause a leak. In making your selection, please check the compatibility of the seal material with the type of fluid and temperature used in the application
- · Please consult us prior to selection or use of CUPLA when they are intended for use with corrosive or flammable gases/liquids and/or in atmospheres of these types of gases and liauids

Warranty and Disclaimer

Our responsibilities for the defects in our products shall be as follows:

· We shall be responsible for any defects in design, material or workmanship of our products, if it is apparent that such defects are due to reasons solely attributable to us · Our responsibilities shall be limited to one of the following, as determined by us:

- (a) repair of any defective products or parts thereof,
- (b) replacement of any defective products or parts thereof; or
- (c) compensation for loss and damages incurred by you, which shall in no case exceed the amount of your purchase price for the defective products.

• We shall in no case be liable for any special, indirect or consequential loss or damages, whether such loss or damages are those arising from work stoppage, impairment of other goods or death or personal injury.

Performance, Dimensions and Its Limitation

Please note the performance charts and outside dimensions in this catalog do not take into account any tolerances found in mass production The information is an average or standard value to be a guide for selecting models and to enable technical appraisal by users

Beware of Imitations

Recently, similar products which invite misidentification or confusion with NITTO KOHKI coupling "CUPLA" have appeared on the market.

- Connection with such a similar product to NITTO KOHKI coupling "CUPLA" may cause:
- 1. Imperfect connection or disconnection
- 2. Reduced air tightness
- 3. Impaired pressure resistance or durability
- 4. Reduced flow rate

and could result in unexpected accidents.

Therefore, connection other than with NITTO KOHKI coupling "CUPLA" must be avoided.

Please be sure to check for our original marks on the right hand side of this page, which are always inscribed on NITTO KOHKI coupling "CUPLA" products, when you order and purchase

Note:

Nitto Kohki cannot accept any liability for any accident that may occur as a result of using couplings of another brand in conjunction with our own.

Safety Guide

The following precautions must be taken when using CUPLA. Please contact Nitto Kohki or the outlet / supplier where you purchased the product with regard to repair procedures, certification on the specification or applications of the products.

Precautions Relating to the Use of All CUPLA products

Be sure to read the "Instruction Sheet" that comes with the product or "Caution" on the package before use.

CUPLA for Low Pressure (Air)

A Caution

- Prior to use, check the compatibility of the seal material and body material against the temperature and the fluid to be used. Selecting the wrong seal material will lead to leakage.
- As to the use of any special paint or solvent, make thoroughly sure of the material compatibility. Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
- Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
 Only use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
 The durability of CUPLA differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment and conditions. Also, stress corrosion cracking may occur if used under corrosive environment. Take note of usage conditions.
 The working pressure and working temperature range for hose connection types depends upon the hose to be used. Prior to use, confirm that the temperature and the type of fluid to be used is suitable for the hose.
 When cleaning CUPLA, care must be taken not to use any material that will affect the seal and body materials.
 Apply a fluoropolymer resin sealant tage on male tappered pipe threads to ensure, on leak. (Applies to thread type)
 On ot exceed the recommended maximum torque when screwing in to the male or female thread of CUPLA for installation. It will cause damage. (Applies to thread type, Nut type)
 Care must be taken when installing CUPLA not to vertify and cause cause damage and of CUPLA for installation.

- Do not exceed the recommended maximum torque when screwing in to the male or female thread of CUPLA for installation. It will cause damage. (Applies to thread type, Nut type)
 Care must be taken when installing CUPLA not to overlighten or cross thread, this can cause damage and lead to leakage. (Applies to thread type, Nut type)
 Do not use anything other than the applicable hose or tube sizes. It will cause leakage. (Applies to those or tube filter connection type)
 Insert the barb (tail) fully into a hose or a tube and secure it tightly with a hose clamp or a nut. Incomplete insertion or insufficient clamping will lead to leakage or sliding off of a hose or a tube from the barb (tail). (Applies to hose or tube filter connection type)
 Never strike CUPLA when inserting barb (tail) into hose or tube. This could cause poor connection. (Applies to hose or tube filter connection type)
 Do not use damaged (cracked) or detroirated hoses or tubes. It will ead to leakage or bursting of hose or tube. (Applies to hose or tube filter connection type)
 Cut off the hose or tube fait engine the stand when reusing it. Failure to do so will lead to leakage or bursting of the soe or tube. Soe the "Instruction manual" enclosed with the product for the normal length. (Applies to manual" enclosed with the product for the normal length. (Applies to the soe or tube.)

- (Applies to hose or tube fitter connection type)
- Prior to use, always perform a leak test after installing CUPLA.
- Prior to use, always perform a leak test after installing CUPLA.
 After connection, try to pull the socket and plug apart to confirm secure connection. If the connection is incomplete, the socket and plug apart to confirm secure connection. If the medium is a gas, an audible bang may be heard on disconnection. We recommend disconnecting this CUPLA should be held firmly in one hand and the Plug in the other.
 If the medium is a gas, an audible bang may be heard on disconnection. We recommend disconnecting this CUPLA in an unpressurized state. (Except for CUPLA with purge function)
 Put a designated dust cap on CUPLA after disconnection when there is a possibility of foreign matter such as dirt sticking to the seal surface.
 Always install a shur-off valve between the pressure source and CUPLA.

- . Do not use with any fluid or medium other than what is specified, to do so could cause leakage or damage

- Do not use with any indu or medium other than what is specinely, to be so could cause leakage or damage.
 The use of inline filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA.
 Always let fluid flow from socket to plug. It will result in reduced flow. (Except for HI CUPLA Two Way Type)
 Do not use CUPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction or leakage.
 Do not let paint stick to CUPLA. It will cause malfunction or leakage.
 Do not drop CUPLA in yary artificial impact, bend or tension. It will cause leakage or damage.
 Do not drop CUPLA. It will cause leakage or malfunction.
 Connecting CUPLA it will cause leakage or malfunction.
 Connecting CUPLA it wills cause enakage or malfunction.

- Do not upp CUPLA, it will cause leakage of mainunction.
 Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime. The use of a 'Leader' or 'Whip' hose of approx. 30 cm in length between CUPLA and equipment is recommended to help alleviate this.
 Use only as quick connect couplings for fluid pipelines. (It cannot be used as a swivel joint)
 Only use CUPLA in a combination with NITTO KOHKI coupling 'CUPLA'.
 Do not disassemble CUPLA. It will cause leakage or damage.

Cautions on Handling CUPLA HOSE

▲ Caution

- Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
 Only use CUPLA that are within their rated temperature range. Otherwise the hose will get damaged or deteriorate and cause leakage. It cannot be used continuously at its lowest or highest rated working temperature.
 Do not use on systems that have a high water content, such as drain discharge, this can damage the hose.
- Do not use on systems that have a high water content, such as drain discharge, this can damage the hose.
 The durability of the Hose differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment and conditions.
 Make sure that there is no twist or bend on the hose before use.
 Do not exceed the maximum extensible length, to do so will damage the hose. See catalogue page for full specification details. (Applies to NK CUPLA COIL HOSE)
 Do not bend the hose less than the minimum-bending radius. It will cause damage to the hose. (06.5 x o 10 mm minimum-bending radius : 50 mm : Applies to NK CUPLA HOSE)
 Do not sue with any fluid or medium other than what is specified, to do so could damage the hose.
 The use of inline filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA. The inclusion of foreign matter in the fluid could damage the hose.
 Do not use ear fire. It will soften or deform the hose and cause damage to the hose.
 Do not use near fire. It will soften or deform the hose and cause damage to the hose.
 Date care not to damage to the hose hose damage to the hose.

- Do not use real mer, it will solven or deform the noise and cause damage to the noise.
 Take care not to damage the hose by dragging over rough ground or concrete. It is also important to ensure that the hose does not become kinked or crushed for long periods.
 Do not use for lifting or hoisting, this can damage the hose.
 Store in a shaded, dry and well-ventilated place.
 Cut off the hose at least 3 cm from the end when reusing it. Failure to do so will lead to leakage or bursting of the hose.
 Prior to use, always perform a leak test after installing CUPLA.

CUPLA for Oxygen / Fuel Gas

Warning

- . Do not use with any fluid or medium other than what is specified, to do so could cause leakage or damage

- Do not use with any fluid or medium other than what is specified, to do so could cause leakage or damage.
 Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
 Replace CUPLA with a new one if backfire occurs. Backfire damages the body and the seal and will lead to leakage or damage.
 Do not use damaged(cracked) or deteriorated hoses. It will cause leakage or bursting of hoses. (Applies to hose barb type)
 Never let oil adhere to CUPLA when installing a hose. It will cause pontaneous fire.
 Insert the barb (tail) fully into a hose and secure it tightly with a hose clamp or a nut. Incomplete insertion or insufficient clamping will lead to leakage or sliding off of a hose from the barb (tail). (Applies to hose barb type)
 Prior to use, always perform a leak test after installing CUPLA. Always check for leakage in course. If any leakage is found, stop using immediately.
 Cut off the hose at least 3 cm from the end when reusing it. Failure to do so will lead to leakage or bursting of the hose. (Applies to hose barb type)
 Do not use CUPLA hear fire or places where gas accumulates. It will lead to leakage or bursting of the hose. (Applies to hose barb type)
 Do not use CUPLA hear fire or places where gas accumulates. It will lead to leakage or bursting of the nose. (Applies to hose barb type)
 Make sure that the valve on the torch is closed before connecting to CUPLA. It connected with valve open, the gas will flow out and could cause a fire or explosion.
 Do not disassemble CUPLA. It will cause leakage or damage.

∧ Caution

- Only use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
 The durability of CUPLA differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment and conditions. Also, stress corrosion cracking may occur if used under corrosive environment. Take note of usage conditions.
 Make sure that O-rings and Packing seals are lubricated with our designated lubricant at all times. The O-rings will get damaged and cause leakage. Not using the designated lubricant will lead to spontaneous fire. (Ask us for the designated lubricant)
 Apply a fluoropolymer resin sealant tape on male tapered pipe threads to ensure no leak. (Applies to thread type)
 Do not exceed the recommended maximum torque when screwing in to the male or female thread of CUPLA for installation. It will cause damage. (Except for hose barb type)
 Do not exceed the recommended maximum torque when screwing in to the male to theose barb type)

- Do not exceed on the economic recommended maximum order when screwing in to the make on remaine time do not COFLA for installation. It will cause damage. (except for nose barb type)
 Do not use anything other than the applicable hose sizes. It will cause leakage. (Applies to hose barb type)
 Never strike CUPLA when inserting barb (tail) into hose. This could cause poor connection. (Applies to hose barb type)
 Do not use damaged (cracked) or deteriorated hoses. It will cause leakage. (Applies to hose barb type)
 After connection, try to pull the socket and plug apart to confirm secure connection. If the connection is incomplete, the socket and plug may disconnect when pressurized.
 Care should be taken when disconnecting CUPLA whilst still pressurized. To prevent injury due to the Plug popping out, CUPLA should be held firmly in one hand and the Plug in the other. If the medium is a gas, an audible barg may be heard on disconnection. We recommend disconnecting this CUPLA in an unpressurized state.
 Always install a shut-off valve between the pressure source and the socket.
 The use of injune filters is strongly and disconnection. The fluid should be clean before reaching CUPLA

- A may a initial a situation varie between one pressure source and une souxer.
 The use of initial filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA.
 Always let fluid flow from socket to plug. It will result in reduced flow.
 Do not use CUPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction or leakage
- Ob not use COPLA in areas or environment where dust such as said or metal power can get in to COPLA. It will Do not let paint strick to CUPLA. It will cause malfunction or leakage.
 Be careful not to put scratches or dents on CUPLA. Especially, scratches on the sealing parts will cause leakage Do not apply any artificial impact, bend or tension. It will cause leakage or damage.
 Do not drop CUPLA. It will cause leakage or malfunction.

- Ob the drop CUPLA in twin cause leakage of manuncion.
 Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
 Use only as quick connect couplings for fluid pipelines. (It cannot be used as a swivel joint)
 Only use CUPLA in a combination with NITTO KOHKI coupling "CUPLA".
 Store CUPLA in a dry environment. Moisture will cause corrosion and may also freeze in low temperatures, which may cause malfunction of CUPLA or other equipment.

Be sure to read the "Instruction Sheet" that comes with the product or "Caution" on the package before use.

MOLD CUPLA / FLOW METER / HOT WATER CUPLA

▲ Warning

- O Do not apply pressure to CUPLA socket while it is disconnected. It will cause leakage or damage. (Applies to MOLD CUPLA or HOT WATER CUPLA)
 O not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
 The fluid in the piping of the plug side will spill out upon disconnection. When using for hazardous fluids (such as hot fluid), discharge all the fluid inside CUPLA before disconnecting, in order to prevent burns, etc. (Applies to MOLD CUPLA)

∧ Caution

- Prior to use, check the compatibility of the seal material and body material against the temperature and the fluid to be used. Selecting the wrong seal material will lead to leakage.
 As to the use of any special paint or solvent, make thoroughly sure of the material compatibility.
 Only use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
 Even if used within the rated operating temperature range, prolonged use of the FLOW METER when under pressure and with the temperature ruper regions will cause leakage. (Especially when the valve is fully open)
 The durability of CUPLA or FLOW METER differs depending on the operating environment and conditions (pressure and temperature range, conduct performance evaluation test under your actual operating environment. Take note of usage conditions.
 The working pressure and working temperature range for hose connection types depends upon the hose to be used. Prior to use, confirm that the temperature and the type of fluid to be used is suitable for the hose. (Applies to MOLD CUPLA)
 Make sure that O-rings and Packing seals are lubricated with grease at all times. If not, the O-rings will get damaged and cause leakage.
 Apply a fluoropolymer resin sealant tape on male tapered pipe threads to ensure no leak. (Applies to MOLD CUPLA for installation. It will cause damage.
 When the valve is fully open or closed, there will be a viol between valve body and the ball valve wink at rup or a fully open or closed, there will be avoid between valve body and the ball valve wink at rup or a fully open or closed. Hore wills are viol between valve body and the ball valve wink at rup or nor closed. Hore will be avoid between valve body and the ball valve wink at rup or a fully open or closed. Hore works are apprecisioned with the temperature range. Cloy Between

- Do not exceed the recommended maximum torque when screwing in to the male or female thread of CUPLA for installation. It will cause damage.
 When installing FLOW METER, in order to protect the spherical surface of the ball valve, install if with the valve in a fully opened state as a rule. (Applies to MOLD CUPLA thread type or FLOW METER or HOT WATER CUPL.
 When the valve is fully open or closed, there will be a void between valve body and the ball valve which can try as amal amount of fluid under pressure. Before taking the body of from the piping, arrival to allow the to lallow the pressure to idischarge. (Applies to hose barb type)
 Isert the barb (tail) fully into a hose and secure it tightly with a hose clamp. Incomplete insertion or insufficient clamping will lead to leakage or solid of a hose from the barb (tail). (Applies to hose barb type)
 Never stike CUPLA when inserting barb (tail) into hose. This could cause poor connection. (Applies to hose barb type)
 On to use damaged(cracked) or form he and when reusing It. Failure to do so will lead to leakage or bursting of the hose. (Applies to hose barb type)
 After connection. Ity to pull the socket and plug part to confirm secure connection. If the connection is incomplete, the socket and plug may disconnect when pressured. (Applies to MOLD CUPLA or HOT WATER CUPLA)
 Always install a shut-off valve between the pressure source and CUPLA.
 Do not use with any fluid or medium other than what is specified, to do so could cause leakage or damage.
 Use it in the set het the full does not freeze: It will cause damage to the valve. (Applies to MOLD CUPLA or HOT WATER CUPLA)
 De on tous exith any fluid or medium other than what is specified, to do so could cause leakage or damage.
 Use it in the set het the full does on threeze in the case of water. If it freezes: It will cause damage to the valve. (Applies to MOLD CUPLA or HOT WATER CUPLA)
 De ont use with any

CUPLA for Low Pressure (Water, Liquid) and for Medium Pressure

A Warning

- Do not apply pressure to CUPLA socket or plug while they are disconnected. It will cause leakage or damage. (Applies to Valve Structures: Two-way shut-off type and One-way shut-off type)
- Do not use CUPLA continuously exceeding the rated working pressure. It will cause leaded age or damage. (vpmore or late or cups and on the very build on end of the very build on t

A Caution

- Prior to use, check the compatibility of the seal material and body material against the temperature and the fluid to be used. Selecting the wrong seal material will lead to leakage

- Phor to use, check the compatibility of the sear material and body material agains the temperature and the full to be used. Selecting the wrong sear material will lead to leakage.
 As to the use of any special paint or solvent, make thoroughly sure of the material compatibility.
 Only use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
 Even if used within the rated operating temperature range, prolonged use of TSP CUPLA Socket with Ball Valve when under pressure and with the temperature in the upper regions will cause leakage. (Especially when the valve is fully open)
 The durability of CUPLA differs depending on the operating environment and conditions.
 Also, stress corrosion cracking may occur if used under corrosive environment. Take note of usage upon the hose or tube to be used. Prior to use, confirm that the temperature and of the type of fluid to be used is suitable for the hose or tube.
 When element CUPLA when the valve is fully open)
- When cleaning CUPLA, care must be taken not to use any material that will affect the seal and body materials.

- •When cleaning CUPLA, care must be taken not to use any material that will affect the seal and body materials.
 •Make sure that O-rings and Packing seals are lubricated with grease at all lutimes. If not, the O-rings will get damaged and cause leakage. (Except CUPLA with end face seal construction)
 •Apply a fluoropolymer resin sealant tape on male tapered pipe threads to ensure no leak. (Applies to thread type)
 •Do not exceed the recommended maximum torque when screwing in to the male or female thread of CUPLA for installation. It will cause damage.
 When installing TSP CUPLA Socket with Ball Valve, in order to protect the spherical surface of the ball valve, install it with the valve in a fully opened state as a rule. (Applies to thread type, Nut type)
 •Care must be taken when installing CUPLA not overtighten or cross thread, this can cause damage and lead to leakage. (Applies to thread type, Nut type), especially body material: stainless steel)
 •When installing the body off from the piping, partially open the valve to allow the pressure to discharge. (Applies to TUPLA Socket with the allow leak in the valve is fully open or closed, there will be a void between valve body and the ball valve which can trap a small amount of fluid under pressure.
 Before taking the body off from the piping, partially open the valve to allow the pressure to discharge. (Applies to TUPLA Socket with the allow leakage)
 •Do not use anything other than the applicable hose or tube sizes. It will cause leakage. (Applies to hose or tube fitter connection type)
 •Do not to a the order or the piping it tiptely with a hose clarm or a nut Incomplete insertion or insertificient clarming will leak to leakage or sliding off d a hose or a true toromotion transition will leak to leakage or sliding off d a hose or a true torom the size insertion or insertificient clarming will leak to leakage or sliding off d a hose or a true toromotion transitinsext flaming will leak to leakage or sliding off d a hose or a tru

- Do not use anyming other than the applicable nose of tube sizes. It will cause leakage. (Applies to nose of tube inter connection type)
 Insert the bark (tail) fully into a hose or a tube and secure it tightly with a hose clamp or a nut. Incomplete insertion or insufficient clamping will lead to leakage or sliding off of a hose or a tube from the barb (tail). (Applies to hose or tube fitter connection type)
 Never strike CUPLA when inserting barb (tail) into hose or tube. This could cause poor connection. (Applies to hose or tube fitter connection type)
 Do not use damaged (cracked) or deteriorated hoses or tubes. It will ead to leakage or bursting of hoses or tube is to hose or tube fitter connection type)
 Cut off the hose or tube fitter secondence into;
 Cut off the hose or tube at a designated length from the end when reusing it. Failure to do so will lead to leakage or bursting of the hose or tube. See the "Instruction manual" enclosed with the product for the normal length.
- (Applies to hose or tube fitter connection type)
 Prior to use, always perform a leak test after installing CUPLA.

- Prior to use, always perform a leak test after installing CUPLA.
 After connection, try to pull the socket and plug apart to confirm secure connection. If the connection is incomplete, the socket and plug may disconnect when pressurized.
 Put a designated dust cap on CUPLA after disconnection when there is a possibility of foreign matter such as dirt sticking to the seal surface.
 Do not connect/disconnect with fluid still under dynamic pressure or static residual pressure. It will cause damage to the valve. (Applies to Valve Structures: Two-way shut-off type and One-way shut-off type) Adways install a shut-off valve between the pressure source and CUPLA.
 Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It will cause leakage or malfunction. (Applies to medium pressure, Valve Structure: Two-way shut-off type) However, if you need to relieve residual pressure, please consult us.
 Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It will cause leakage or damage.
 Use it in the state that the fluid does not freeze in the case of water. If it freezes, it will cause damage to CUPLA.
 The use of inline filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA.
 Design and keep the fluid flow speed through CUPLA below 8 m/s. It will cause damage to the valve if used at 8m/s or over. (Applies to Valve Structures: Two-way shut-off type and One-way shut-off type)
 When using TSP CUPLA Socket with Ball Valve, operate the ball valve slowly to prevent water hammer from occurring. Also be careful not to get fingers caught when operating the handle.
 Do not use CUPLA in which as or denotes on metal powder can get in to CUPLA. It will lead to malfunction or leakage.
 Be careful not to put scratches or dents on CUPLA. Especially, scratches on thes alealing parts will cause leakage.
 Do not apply any

- Do not apply any artificial impact, bend or tension. It will cause leakage or damage

- Up not apply any artificial impact, bend of tension. It will cause leakage of admage.
 Do not drop CUPLA. It will cause leakage or malfunction.
 Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
 Use only as quick connect couplings for fluid pipelines. (It cannot be used as a swivel joint)
 Only use CUPLA in a combination with NITTO KOHKI coupling "CUPLA". (Except LEVER LOCK CUPLA)
 Do not disassemble CUPLA. It will cause leakage or damage.
 When storing TSP CUPLA Sockets with Ball valve, ensure that the valve is fully open. If stored with the valve partially open, the packing will deform and cause leakage.

Be sure to read the "Instruction Sheet" that comes with the product or "Caution" on the package before use.

CUPLA for High Pressure

\Lambda Danger

. Do not apply pressure to CUPLA socket or plug while they are disconnected. It will cause leakage or damage

Warning

- O not use CUPLA continuously exceeding the rated working pressure. Also, do not use 700R CUPLA in an environment where there is impulse pressure. It will cause leakage or damage.
 Do not connect/disconnect with fluid still under dynamic pressure or static residual pressure. It will cause damage to the valve. However, the HSP-PV type can be connected under static residual pressure. It will cause damage to the valve. However, the HSP-PV type can be connected under static residual pressure. It will cause damage to the valve and plug may disconnect when pressurized.
 Only use CUPLA in a combination with NTTO KOHK coupling "CUPLA". However, 200 CUPLA is interchangeable with couplers complying with ISO7241-1A.
 When using by connecting 280 CUPLA with other brand's, compare the pressure specifications and use under the lower pressure.
 D and discontraptive CUPLA with other brand's, compare the pressure specifications and use under the lower pressure.

- Do not disassemble CUPLA. It will cause leakage or damage.

A Caution

- Prior to use, check the compatibility of the seal material and body material against the temperature and the fluid to be used. Selecting the wrong seal material will lead to leakage.
 As to the use of any special paint or solvent, make thoroughly sure of the material compatibility.
 Only use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
 The durability of CUPLA differs depending on the operating environment. Take note of usage conditions.
 When cleaning CUPLA, care must be taken not to use any material that will affect the seal and body materials.
 When cleaning GUPLA, care must be taken not to use any material that will affect the seal and body materials.
 When cleaning GUPLA, care must be taken not to use any material that will affect the seal and body materials.
 Apply a fluoropolymer resin sealant tape on male tapered pipe threads to ensure no leak.
 Do not exceed the recommended maximum torque when screwing in to the male or female thread of CUPLA for installation. It will cause damage.
 Care must be taken when installing CUPLA. Anot to overlighten or cross thread, this can cause damage and lead to leakage. (Applies to HSU CUPLA, S210 CUPLA)
 Prior to use, always perform a leak test after installing CUPLA.
 Prior to use, always perform a leak test after installing CUPLA.
 Put a designated dust cap on CUPLA after disconnection when there is a possibility of foreign matter such as dirt sticking to the seals and toking to the reseal will be dust cap on CUPLA after disconnection when there is a possibility of foreign matter such as dirt sticking to the seal surface.
 Always install a shut-off wave between the pressure source and CUPLA.

- Put a designated dust cap on CUPLA after disconnection when there is a possibility of foreign matter such as dirt sticking to the seal surface.
 Always install a shut-off valve between the pressure source and CUPLA.
 Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It will cause leakage or mafunction. However, if you need to relieve residual pressure, please consult us.
 Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It will cause leakage or damage. Do not use 280 CUPLA with water-glycol operating oil. The plating will dissolve.
 Use it in the state that the fluid does not freeze in the case of water. If it freezes, it will cause damage to CUPLA.
 The use of inline filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA.
 Design and keep the fluid flow speed through CUPLA below 8 m/s. It will cause damage to the valve if used at 8 m/s or over.
 Do not use CUPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction or leakage.
 Do not use CUPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction or leakage.

- Do not use CUPLA. It will cause malfunction or leakage.
 Do not tay CUPLA. It will cause malfunction or leakage.
 Do not tay CUPLA. It will cause malfunction or leakage.
 Be careful not to put scratches or dents on CUPLA. It will cause malfunction or leakage.
 Do not tay phy any artificial impact, bend or tension. It will cause leakage or damage.
 Do not tay phy any artificial impact, bend or tension. It will cause leakage or damage.
 Do not tay phy any artificial impact, bend or tension. It a FLAT FACE CUPLA FP plug is dropped, there is a possibility that the valve may open, to re-set, connect the Socket to the Plug and disconnect, the valve will return to its original position.
 Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
 Use only as quick connect couplings for fluid pipelines. (It cannot be used as a swite joint)
 When using O-Ring seals for GP Type or GS Type of HSP CUPLA, use the O-Ring size described on the "Instruction manual" enclosed with the product.

- Due to the metal-touch valve structure, 450B CUPLA and 700R CUPLA will slightly leak when not coupled. * Contact us when using CUPLA for high pressure gases.

Overall MULTI CUPLA

A Caution

- Prior to use, check the compatibility of the seal material and body material against the temperature and the fluid to be used. Selecting the wrong seal material will lead to leakage.
- Prior to use, creck the compatibility of the sear material and body material against the temperature and the load to be used. Selecting the wind sear material will read to teakage.
 As to the use of any special paint or solvers, make thoroughly sure of the material compatibility.
 Only use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
 The durability of CUPLA differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment and conditions. Also, stress corrosion cracking may occur if used under corrosive environment. Take note of usage conditions.
 When cleaning CUPLA, care must be taken not to use any material that will affect the seal and body materials.
 Apply a flucorpolymer resin sealant tage on male tapered pipe threads to ensure on leak. (Apples to snarp ing mount Type, MAM Type, MAM-A Type, MAM-B Type)
 Do not exceed the recommended maximum forque when screwing in to the male or female thread of CUPLA for installation. It will cause damage.

- · Prior to use, always perform a leak test after installing CUPLA. Always install a shut-off valve between the pressure source and CUPLA.

- Always install a shut-off valve between the pressure source and CUPLA.
 Do not use with any fluid or medium other than what is specified, to do so could cause leakage or damage.
 The use of inline filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA.
 Do not use CUPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction
 Do not use CUPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction
 Do not use to put stick to CUPLA. It will cause malfunction or leakage.
 Be careful not to put scratches or dents on CUPLA. Scratches on the sealing parts will cause leakage.
 Do not apply any artificial impact, bend or tension. It will cause leakage or damage.
 Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
 Use only as quick connect couplings for fluid pipelines.
 Only use CUPLA in a combination with NITTO KOHKI coupling "CUPLA". on or leakage

MAM Type

Marning

Do not connect/disconnect with fluid still under dynamic pressure or static residual pressure exceeding the maximum working pressure. It will cause damage to CUPLA.
 Do not drop MULTI CUPLA. It will cause deformation of the plate.

▲ Caution

- Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
- Up not use CUPLA commutously exceeding the rated working pressure. It will cause leakage or damage.
 Make sure that O-rings and Packing seals are lubricated with grease or oil at all times. If not, the O-rings will get damaged and cause leakage.
 Do not deform the stop ring when installing CUPLA. It the stop ring is widened, it may come off from its groove and lead to poor connection or damage of CUPLA. Also change the stop ring with a new one when replacing CUPLA.
 Install hoses symmetrically from the locking unit when they are connected to CUPLA in order to distribute the reaction force evenly. Failure to do so will lead to breakage.
 Connect after making sure that the lever is in the "connect" position. It will not connect if it is not in the "connect" position.
 Do not disassemble CUPLA. It will cause breakage.
 Do not disassemble CUPLA. It will cause leakage or damage.

MAM-A Type / MAM-B Type

🗥 Warning

- Do not connect or disconnect CUPLA while they are pressurized or residual pressure of more than 0.6 MPa remains. It will cause damage to CUPLA.
 Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
 Do not drop MULTI CUPLA. It will cause deformation of the plate.

∧ Caution

- Make sure that O-rings and Packing seals are lubricated with grease or oil at all times. If not, the O-rings will get damaged and cause leakage.
 Install the C type retaining ring by using a pair of snap ring pilers. If the C type retaining rings are expanded too much, it will come off from its groove and lead to poor connection or breakage. Also change the retaining ring with a new one when replacing CUPLA.
 Install hoses symmetrically from the locking unit when they are connected to CUPLA in order to distribute the reaction force evenly. Failure to do so will lead to breakage.
 Connect after making sure that the lever is in the "connect" position. It will not connect if it is not in the "connect" position.
 Do not force turning the lever. It will cause breakage.

- . Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It will cause leakage or malfunction • Use it in the state that the fluid does not freeze in the case of water. If it freezes, it will cause damage to CUPLA
- Design and keep the fluid flow speed through CUPLA below 8 m/s. It will cause damage to the valve if used at 8 m/s or over.
 Do not disassemble CUPLA. It will cause leakage or damage.

Be sure to read the "Instruction Sheet" that comes with the product or "Caution" on the package before use.

MULTI CUPLA Series

MAS Type / MAT Type

A Warning

Do not apply pressure to CUPLA socket or plug while they are disconnected. It will cause leakage or damage
 Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.

Caution

- Cauttoon
 Make sure that O-rings and Packing seals are lubricated with grease or oil at all times. If not, the O-rings will get damaged and cause leakage.
 Keep the conter axis eccentricity of the Socket and Plug within 0.6 mm diameter. Failure to do so will lead to leakage or breakage.
 Install the C type retaining ring by using a pair of snap ring pliers. If the C type retaining rings are expanded too much, it will come off from its groove and lead to poor connection or breakage.
 Install the C type retaining ring with a new one when replacing OUPLA. (Applies to MAS Type CUPLA)
 Care must be taken when installing CUPLA not to overlighten or cross thread, this can cause damage and lead to leakage.
 When connecting, connect socket and plug together tightly without a gap. If the gap exceeds 0.5 mm the flow will be reduced.
 For the load required to maintain connection when CUPLA is connected, see the page in this catalog where MAS Type / MAT Type is described. Connection exceeding the maximum acceptable load will cause breakage.
 Do not connect/disconnect with fluid still under dynamic pressure or static residual pressure. It will cause damage to the valve.
 Do not still the tip of an automatic shu-toff valve with a harmer or a similar tool. It will cause leakage to malfunction.
 Use it in the state that the fluid does not freeze in the case of water. If it freezes, it will cause damage to CUPLA.
 Design and keep the fluid fluid speed through CUPLA below 8 ms. It will cause damage to the valve if used at 8 m/s or over.
 Do not strice values beakage or malfunction.

- Do not drop CUPLA. It will cause leakage or malfunction.
- · Do not disassemble CUPLA. It will cause leakage or damage

MALC-01 Type

▲ Caution

- Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
 Keep the center axis eccentricity of the Socket, Plug and/or hole in the plate within 2 mm diameter. Failure to do so will lead to leakage or breakage. For the dimensions of end configurations for processing on plates, see the page in this catalog where MALC-01 Type is described.
 Obliquity of socket and plug must be within 0.5 degrees during connection. If installed exceeding 0.5 degrees, it will cause leakage or damage.
 When connecting, connect socket and plug together tightly without a gap. However, it can be used even when the gap is 0.5 mm. If the gap exceeds 0.5 mm the flow will be reduced.
 For the load required to maintain connection when CUPLA is connected, see the page in this catalog where MALC-01 Type is described. Connection exceeding the maximum acceptable load will cause breakage.
- Connecting below the minimum load required to maintain connection will result in reduced flow.
- Connecting below the minimum load required to maintain connection will result in reduced tiow. When using water, judge whether CUPLA can be used or not by conducting a performance evaluation test under your actual operating environment and conditions. Leakage may occur according to rust or foreign matter in the piping or solidified minerals. Use it in the state that the fluid does not freeze in the case of water. If it freezes, it will cause damage to CUPLA. Design and keep the fluid flow speed through CUPLA below 8 m/s. It will cause damage to the valve if used at 8 m/s or over. Do not drop CUPLA. It will cause leakage or mafunction. Do not drop CUPLA. It will cause leakage or damage.

MALC-SP Type / MALC-HSP Type

\Lambda Danger

• Do not use uncoupled socket or plug continuously exceeding its rated working pressure. It will cause leakage or damage. (Applies to MALC Type CUPLA)

A Warning

Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
 Do not disassemble CUPLA. It will cause leakage or damage.

▲ Caution

- Keep the center axis eccentricity of the Socket and Plug within 2 mm diameter. Failure to do so will lead to leakage or breakage.
- Keep the center axis eccentricity of the Socket and Plug within 2 mm diameter. Failure to do so will lead to leakage or breakage.
 Obliquity of socket and plug must be within 0.5 degrees during connection or disconnection. If installed ecceeding 0.5 degrees, it will cause leakage or damage.
 Install the C type retaining ring by using a pair of snap ring pilers. If the C type retaining ring varies a pair of snap ring pilers. If the C type retaining ring varies apair of snap ring pilers. If the C type retaining ring varies apair of snap ring pilers. If the C type retaining ring varies apair of snap ring pilers. If the C type retaining ring varies apair of snap ring pilers. If the C type retaining ring varies apair of snap ring pilers. If the C type retaining ring varies apair of snap ring pilers. If the C type retaining ring varies apair of snap ring pilers. If the C type retaining ring varies apair of snap ring pilers. If the C type retaining ring varies apair of snap ring pilers. If the C type retaining ring varies apair of snap ring power and lead to leakage. (Applies to MALC-SP Type CUPLA)
 When connecting, connect socket and plug together tightly without a gap. However, it can be used even when the gap is 0.5 mm. If the gap exceeds 0.5 mm the flow will be reduced.
 For the load required to maintain connection when CUPLA is connected, see the page in this catalog where MALC-SP Type of MALC-HSP Type is described. Connection exceeding the maximum acceptable load will cause breakage. Connecting below the minimum load required to maintain connection will cause breakage. Connecting below the minimum load required to maintain connection will result in reduced flow.
 Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It will cause leakage or malfunction.
 Use it in the state that the fluid does not freeze in the case of ware. If it freezes, it will cause damage to CUPLA.
 Design and keep the fluid flow speed through C

SEMICON CUPLA Series

Warning

- Constance of the second o

A Caution

- The durability of CUPLA differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment and conditions.

- The durability of CUPLA differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment. Take note of usage conditions. Orings are consumable items. Replace them periodically.
 If necessary, conduct an ellution test and confirm the suitability of the material.
 When cleaning CUPLA, care must be taken not to use any material that will affect the seal and body materials.
 Apply a flucoropolymer resis controsmented on male tapered pipe threads to ensure no leak.
 Do not exceed the recommended maximum torque when screwing in to the male or female thread of CUPLA for installation. It will cause damage. (Applies to SP Type, SCS Type, SCY Type)
 Care must be taken when installing CUPLA, not to overtighten or cross thread, this can cause damage and lead to leakage. (Applies to SP Type, SCS Type, SCY Type)
 When installing SCT Type or SCAL Type CUPLA, firstly apply a fluoropolymer resin sealant tape on the male tapered pipe thread and tighten firmly by hand. Then, additionally tighten with a wrench by turning it 1 3/4 to 2 turns.
 At this time, overtightening will damage the thread and cause leakage, so be careful.
 Do not use anything other than the applicable tube sizes.
 It will be applied to the sizes.
 Contact us if detail dimensions of the fixing part is required, such as 19/32-18UNS (for SP Type or SCS Type) or application shape for plugs of SCF Type CUPLA.
 For the purpose of reducing the insertion load on connection and to prevent O-ring from damage, apply pure water or a lubricant that is suitable for the operational environment to the Plug ip and sealing surface. (Applies to SP Type, SCS Type)
 Afer connection, try to pull the socket and plug apart to confirm secure connection. If the connection is incomplete, the socket and plug may disconnect when pressurized.
 For fluoropolymer resin. CUPLA, confirmuse will result in reduced performance. To exe
- For fluoropolymer resin CUPLA, continuous use under dynamic pressure will result in reduced performance. To extend lifetime, it is recommended to be kept unpressurized unless it is necessary.
 Since the bellows of the SCAL Type CUPLA Socket is made of polytetrafluoroethylene (PTFE), a small amount of gas will escape.
- Since the belows of the SCAL type CUPLA socket is made of polytetratudorethylene (PTE), a simil amount of gas will escape.
 When using for hazardous fluids, discharge all the fluid inside CUPLA with nitrogen gas, etc., before disconnection, if disconnecting without discharging the fluid, a small amount of fluid will spill out.
 Always mount a designated dust cap after disconnection. Any foreign matter adhering to the sealing surface will cause leakage.
 Always install a shut-off valve between the pressure source and CUPLA.
 The use of inline filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA.
 Design and keep the fluid flow speed through CUPLA below 8 m/s. It will cause damage to the valve if used at 8 m/s or over.
 Do not use CUPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will leave combinations or leakage.

- Do not let paint stick to CUPLA. It will cause malfunction or leakage.
 Be careful not to put scratches or dents on CUPLA. Scratches on the sealing parts will cause leakage. Especially, CUPLA made of fluoropolymer resin are deformed easily, so be careful.

Safety Guide

Precautions Relating to the Use of All CUPLA products

Be sure to read the "Instruction Sheet" that comes with the product or "Caution" on the package before use.

SEMICON CUPLA Series

▲ Caution

- Do not apply any artificial impact, bend or tension. It will cause leakage or damage.
 Do not drop CUPLA. It will cause leakage or malfunction.
 Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
 Use only as quick connect couplings for fluid pipelines. (It cannot be used as a swivel joint)
 Do not disassemble CUPLA. It will cause leakage or damage.
- Check CUPLA regularly. Stop using immediately if anything unusual is found on CUPLA

CUPLA for Inert Gas

Warning

- Do not apply pressure to CUPLA socket or plug while they are disconnected. It will cause leakage or damage. (Applies to SP-V CUPLA)
 Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
 The fluid in the piping will spill out upon disconnection. Take extra care when using at places where it is liable to cause anoxia. (Applies to PCV PIPE CUPLA)

▲ Caution

- Characteristics
 Prior to use, check the compatibility of the seal material and body material against the temperature and the fluid to be used. Selecting the wrong seal material will lead to leakage.
 Only use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
 The durability of CUPLA differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment and conditions. For PCV PIPE CUPLA, replace it with a new one after connection/disconnection of 5000 times as an approximate guide.
 When cleaning CUPLA, care must be taken not to use any material that will affect the seal and body materials.
 Apply thread sealants on male tapered pipe threads to ensure no leak.
 Do not exceed the recommended maximum torque when screwing in to the male or female thread of CUPLA for installation. It will cause damage.
 Care must be taken when installing CUPLA not to voretighten or cross thread, this can cause damage and lead to leakage. (Applies to SP-V CUPLA Body material: Stainless steel)
 Prior to use, always perform a leak test after installing CUPLA.
 Make sure that O-rings are lubricated with grease at all times. If not, the O-rings will get damaged and cause leakage. (Applies to SP-V CUPLA seal materials:)
 For the purpose of reducing the insertion load on connecter O-ring from damage, apply a lubricant that is suitable for the operational environment to the Plug tip and sealing surface. (Applies to SP-V CUPLA Seal materials:)

- Make sure that O-rings are lubricated with grease at all times. If not, the O-rings will get damaged and cause leakage. (Applies to SP-V CUPLA seal materials:)
 For the purpose of reducing the insertion load on connection and to prevent O-ring from damage, apply a lubricant that is suitable for the operational environment to the Plug tip and sealing surface. (Applies to SP-V CUPLA Seal material: HNBR)
 Do not use pipe sizes other than the suitable sizes. It will cause leakage. Contact us if required to use Aluminum alloy pipes. (Applies to PCV PIPE CUPLA)
 Channfer the edge of the copper pipe to be used. If not channfered, it will damage the packing and cause leakage. Do not use pipes with deformation or burrs. It will lead to leakage or poor connection. (Applies to PCV PIPE CUPLA)
 When connecting copper pipes, push down the lever only after confirming that the end of the copper pipe is pressed against the packing in gride CUPLA. At this time, be careful not to get fingers caught. (Applies to PCV PIPE CUPLA)
 After connection, try to pull the socket and plug apart or CUPLA and pipe apart to confirm secure connection. If the connection is incomplete, the socket and plug may disconnect when pressurized.
 Do not us if its required to connect/disconnect SP-V CUPLA under dynamic pressure or static residual pressure.
 When connected with the copper pipe, do not rotate the pipe. It will damage the packing and cause leakage. (Applies to PCV PIPE CUPLA)
 Contact us if its required to connect/disconnect SP-V CUPLA under dynamic pressure easeleakage. (Applies to PCV PIPE CUPLA)
 When connected with the copper pipe, do not rotate the pipe. It will damage the packing and cause leakage. (Applies to PCV PIPE CUPLA)
 What connecting on our CUPLA affer disconnection when there is a opsibility for forein matter such as dist disclinking to the seal surface. (Applies to SP-V CIPLA on the seal surface.

- Write Conflected with the copper pipe, do Not notate the pipe. It will damage the packing and cause teakage. (Applies to PCV PTP COPLA)
 Put a designated dust cap on CUPLA after disconnection when there is a possibility of foreign matter such as dirt sticking to the seal surface. (Applies to SP-V CUPLA)
 When disconnected, store CUPLA with the lever in the 'Open' position. (Applies to PCV PTPE CUPLA)
 Maways install a shut-off valve between the pressure source and CUPLA.
 Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It will cause leakage or malfunction. (Applies to SP-V CUPLA) However, if you need to relieve residual pressure, please consult us.
 Do not use with any fluid or medium other than what is specified, to do so could cause leakage or damage.
 The use of inline filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA.
 Do not use cUPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction or leakage.
 Do not use with any fluid or medium other than what is pecified, to do so could cause leakage or to CUPLA.
 Do not use cuPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction or leakage.

- Do not let paint stick to CUPLA. It will cause malfunction or leakage.
- Be careful not to put scratches or dents on CUPLA. Especially, scratches on the sealing parts will cause leakage

- Be careful not to put scratches or dents on CUPLA. Especially, scratches on the sealing parts will cause leakage.
 Do not apply any artificial impact, bend or tension. It will cause leakage or damage.
 Do not drop CUPLA. It will cause leakage or malfunction.
 Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
 Stop using CUPLA if the lever is deformed. (Applies to PCV PIPE CUPLA)
 Ensure that any copper residue or swarf that has adhered to the inside of CUPLA is removed after use. (Applies to PCV PIPE CUPLA)
 Use only as quick connect couplings for fluid pipelines. (It cannot be used as a swivel joint) (Applies to SP-V CUPLA)
 Only use CUPLA in a combination with NITTO KOHKI coupling "CUPLA". (Applies to SP-V CUPLA)
 On not direasemble CUPLA I at will cause leakane or dmane.

- Do not disassemble CUPLA. It will cause leakage or damage

PAINT CUPLA

Warning

• Make sure that a hose containing a ground wire is connected to a ground. Insufficient grounding will lead to fire or dangerous explosion caused by possible sparks of static electricity

• Wear appropriate clothes and protective equipment such as safety glasses, face guard and gloves at all times. Otherwise it could be potentially hazardous when paint or solvent splashes on to operators.

∧ Caution

- This CUPLA is designed for paints diluted by solvents. Do not use this CUPLA for any other applications such as Powder coating, Electrostatic coating or Electrodeposition coating. The seal material will deteriorate and cause leakage. As to the use of any special paint or solvent, make thoroughly sure of the material compatibility.
 Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.

- Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
 Only use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
 The durability of CUPLA differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment and conditions. Also, stress corrosion cracking may occur if used under corrosive environment. Take note of usage conditions.
 Do not exceed the recommended maximum torque when screwing in to the male or female thread of CUPLA for installation. It will cause damage.
 Prior to use, always perform a leak test atter installing CUPLA.
 After connection, rity to pull the socket and plug apart to confirm secure connection. If the contection is incomplete, the socket and plug apart to confirm secure contection. If the contact the human body.
 Clean CUPLA each time after use. Otherwise banking vou aut and will cause mafunction, insufficient color mix or conrounding. When cleaning CUPLA, care must be taken not to use any material that will affect the seal and be.

- I ne ruiu in me piping or me piug side will spill out upon disconnection. Be careful so that it will not contact the human body.
 Clean CUPLA each time after use. Otherwise paint will dry out and will cause malfunction, insufficient color mix or poor grounding. When cleaning CUPLA, care must be taken not to use any material that will affect the seal and body materials.
 When cleaning, do not try to open the valve by inserting something except the plug into the socket. It will cause leakage.
 Always install a shut-off valve between the pressure source and CUPLA.
 The use of inline filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA.
 Always let fluid flow trom socket to plug.
 Do not use (DPLA) in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction or leakage.
 Be careful not to put scratches or dents on CUPLA. Especially, scratches on the sealing parts will cause leakage.
 Do not used vany artificial impact, bend or tension. It will cause leakage or damage.

- Do not apply any artificial impact, bend or tension. It will cause leakage or damage.
 Do not drop CUPLA. It will cause leakage or malfunction.
- Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
 Use only as quick connect couplings for fluid pipelines. (It cannot be used as a swivel joint)
 Only use CUPLA in a combination with NITTO KOHK coupling "CUPLA".
 Do not disassemble CUPLA. It will cause leakage or damage.

Be sure to read the "Instruction Sheet" that comes with the product or "Caution" on the package before use.

HYGIENIC CUPLA

🕂 Warning

• Any residual fluid remaining in the passage will spill out on disconnection. Drain any residual fluid before disconnection to avoid burns or injury to the skin when dangerous fluid such as chemical agent or high temperature fluid is used If the fluid comes into contact with the skin, stop the disconnecting work and consult a doctor if necessary.

A Caution

Observe the cautions below. If not observed, it could result in burns, injury to the skin, damage to the product or other machinery when dangerous fluid such as chemical agent or high temperature fluid is used. Stop using CUPLA immediately if this happens.

- CUPLA can be easily disassembled for cleaning. CUPLA should be evaluated before use to determine the suitability with regard to sanitation and safety.
 Especially when using O-rings of other brands than Nitto Kohki, be sure to evaluate the O-ring at your end.
 Prior to use, check the compatibility of the seal material and body material against the temperature and the fluid to be used.
- Selecting the wrong seal material will lead to leakage.

- This back, referred to be object.
 Selecting the wrong seal material will lead to leakage.
 Do not use CUPLA continuously under any pressure exceeding the rated working pressure. This may cause leakage or damage.
 Use only within range of its rated temperature. May cause damage or deterioration to the sealing and leak if used otherwise.
 Also, do not use continuously at the lowest or highest working temperature.
 The durability of CUPLA differs depending on the operating environment and conditions.
 When assembling, do not deform the lox plate by applying excessive force. It will cause leakage.
 When assembling, do not dorp the sparsing excessive force. It will cause back the ordinate. It will cause leakage.
 When assembling do or deform the lox plate by applying excessive force. It will cause back the ordinate. It will cause leakage.
 When assembling of CUPLA, does with cUPLA in disassembled state. Welding in assembled parts or damage the O-ring and cause leakage.
 When washing to CUPLA, lease polish the welded part. (Surface roughness Ra ≦ 1.0 µm recommended for the liquid contact parts. Surface roughness of the weld line should not exceed Px=16 µm.)
 If it is not polished or if the surface roughness becomes rougher than the recommended value, it may potentially cause the spread of bacteria.
 Malfunction caused by welding (directly or otherwise) is not included in the warnaty.
 For the ferrule type, please use ferrule couplings conforming to IDF / ISO 2852.

- Marunction caused by Weiding (directly of orderWs) is not included in the warrany.
 For the ferrule type, please use ferrule couplings conforming to IDF / ISO 2852.
 Prior to use, always perform a leak test after installing CUPLA.
 When a high temperature fluid is applied to CUPLA, be careful in handling CUPLA as it also becomes hot.
 If CUPLA is used in a high temperature atmosphere, the cam handle may not rotate smoothly.
 In such case, please apply water, etc. to the part where the cam handle and the lock plate ASSY is in contact.
 When oth case, please apply water, etc. to the part where the cam handle are take countemeasure against this if required.
 When CUPLA remains connected for long periods of time, it may become difficult to disassemble.
 In bic case, do not forcefully ture the socket and huits of discomed at this may durage the seal material and cause laekage.
- In this case, do not forcefully turn the socket and plug to disconnect as this may damage the seal material and cause leakage
- Do not disconnect with fluid still under dynamic pressure or static residual pressure.

- Up not alsoonnect with muid still under dynamic pressure or static resolutal pressure.
 Do not drop CUPLA. It will cause leakage or maffunction.
 Always install a shut-off valve between the pressure source and CUPLA.
 Up not apply any artificial impact, bend or tension. It will cause leakage or damage.
 Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
 Use only as quick connect couplings for fluid pipelines.
 Only use CUPLA in a combination with NITTO KOHKI coupling "CUPLA".
 Check CURLA executor.

- · Check CUPLA regularly. Stop using immediately if anything unusual is found on CUPLA
- When storing CUPLA, remove the Oring from the plug. Otherwise, it may become difficult to remove due to adsorption.
 Before using CUPLA, disassemble and clean it in the way that is appropriate to your usage conditions and not affecting the seal material and body material

SEMI-STANDARD CUPLA Series

Contact us separately for detail cautions for the SEMI-STANDARD CUPLA series.

Maintenance of CUPLA

O-ring Replacement Procedure

The internal O-ring is a consumable item. If the O-ring in the socket has failure such as wear and tear or deterioration, take the following steps to replace it with a new one. Always use genuine Nitto Kohki O-rings.

 Store CUPLA in a place where no dust or foreign matter gets in. If fluid flows while the dust or foreign matter is present inside Store CUPLA in a place where no dust or foreign matter gets in. If fluid flows while the dust or foreign matter may go into the equipment connected to CUPLA and may cause malfunction.
 Store CUPLA indoors away from water or moisture.
 Store CUPLA in a shaded, dry and well-ventilated place.
 Do not to drop CUPLA I, twill deform or damage CUPLA.
 If CUPLA are stored or not being used for a long period of time, check their appearance, function and performance before use.

CUPLA should be inspected periodically to ensure safe operation and to prevent them from a performance drop or malfunction. If there is a malfunction in CUPLA or wear and tear, please replace it with a new one. If you have any concerns, contact Nitto Kohki or the distributor from whom you purchased your CUPLA.

How to Remove the O-ring Use an optional O-ring replacement Jig to remove the O-ring. Be careful not to damage the groove of O-ring with the jig. Used O-rings with wear and tear or deterioration can be removed easily with the jig. After removing the O-ring, wipe the groove clean with a cloth.

How to Install a New O-ring

After making sure that no dust or foreign matter exists in the groove of O-ring, push in part of the O-ring and the remaining part can be easily pressed in with the jig.

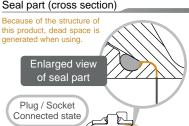

O-ring replacement Jig

2 HSP CUPLA has a backup ring. Insert an O-ring in the place as shown in the figure. If CUPLA connection/disconnection is hard and not smooth after the O-ring has been

Lock plate ASSY O-ring

Socket

F σ

Plug

- The O-ring and Lock plate ASSY are consumable items.
 Please replace the Lock plate ASSY at approximately 1,000 times connections / disconnections.
 When the Lock plate ASSY is deformed, replace it with a new
- one regardless of connection/disconnection times The durability of the O-ring differs depending on the operating environment and conditions (pressure and temperature etc.).
